Hunger Map 2019

821 million people - more than 1 in 9 of the world population - do not get enough to eat

Prevalence of undernourishment in the total population (percent) in 2016-18

<2,5% <5% 5-14,9% 15-24,9% 25-34,9% >35% DATA NOT AVAILABLE

Undernourishment is defined as the condition in which an individual's habitual food consumption is insufficient to provide the amount of dietary energy required to maintain a normal, active, healthy life. The indicator is reported as the prevalence of undernourishment (PoU), which is an estimate of the percentage of individuals in the total population that are in a condition of undernourishment. To reduce the influence of possible estimation errors in some of the underlying parameters, national estimates are reported as a three-year moving average.
