ABOUT THIS BULLETIN

This bulletin intends to inform food security analysts, as well as decision makers, given the importance of markets and trade in income generation and food access. Price shocks constrain households' ability, mostly the poor, to access food or gain acceptable income to cover their basic expenditures.

Data used in this bulletin are from e-soko project, housed in the Ministry of Agriculture and Animal Resources (MINAGRI). The system collects retail prices in almost 61 markets for about 78 commodities. Price data collection is done twice a week in urban markets, while it is done once a week in rural markets. In this bulletin, we generally select one key market per district, with Kimironko being focused on in Kigali City for analysis.
