April 2018

IRAQ Market Monitor Report

[Click here to read the report online](#)

Highlights

- As of April, 3.7 million previously displaced people have returned to their areas of origin, while 2.1 million remain displaced.
- Food prices mainly showed a decreasing trend in April. The price of wheat flour, which is a main staple, surged in Wassit in April making the food basket most expensive in Wassit.
- The Alert for Price Spikes (ALPS) indicator shows the reference food basket at stress level in Babylon, Thi-Qar and Qadissiya
- The cost of unskilled labour in April hasn't changed much across the country; with an exception for Babylon where the cost of unskilled labor decreased by 23%. As a consequence of lower wages and decreased costs of wheat flour, the wage-to-wheat terms of trade (ToT) almost didn't change.

Socioeconomic Background

As of April, 3.7 million previously displaced people have returned to their areas of origin, while 2.1 million remain displaced.

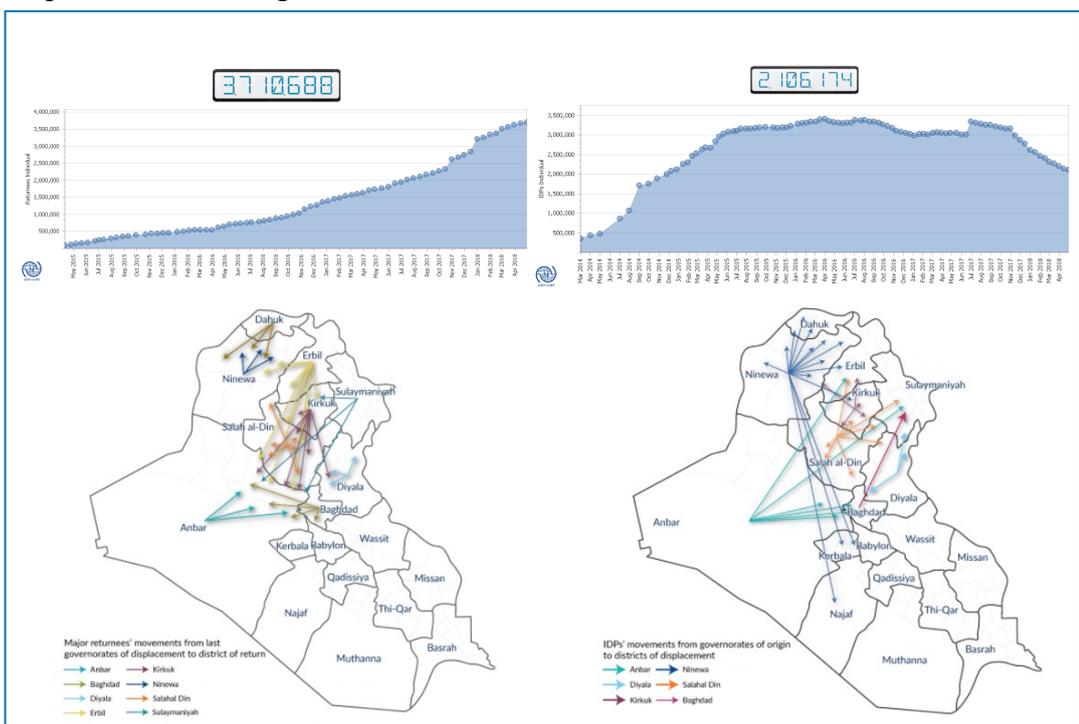

Some 99 percent of returns are taking place to areas of origin in governorates in the center and south of Iraq.

The total number of IDPs in Iraq decreased by approximately 5 per cent during the month of March 2018.

Babylon has not witnessed any returns, with 33,906 IDPs from Babylon still displaced within the governorate itself¹.

As Iraq begins to move on from the long conflict with Islamic State (IS), it is pressing forward with plans to upgrade its infrastructure. These include airports, rail links, a port and increased utility capacity. Bureaucratic obstacles and the disbursement of promised reconstruction funds will hinder progress and might affect markets.

The below dashboard describes the most recent updates regarding IDPs and returnees².

² IOM—Displacement Tracking Matrix (DTM) Iraq

Map 2: Cost of Minimum Food Basket (in IQD)

were found more expensive. A similar volatility was registered in Kirkuk where milk and wheat flour were found to be less expensive than the previous month while onions were recorded at much higher prices. In Najaf the price of onions increased significantly, while milk and rice showed a decrease in prices. On the other hand, Thi-Qar, Dahuk, Diyala and Salah Al-Din showed a decreasing trend of food prices. Wassit's prices were mainly stable with surges for wheat flour which led to a sharp increase in the price of food basket compared to March.

Chart 2: Cost of Minimum Food Basket (in IQD) trend

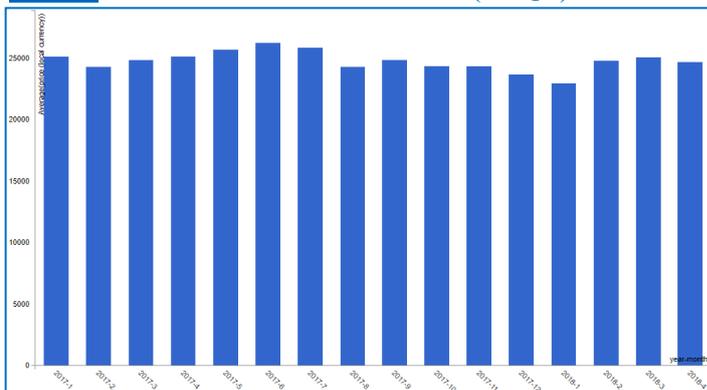

Chart 3: Availability Analysis

Governorate	Wheat flour	Meat (beef)	Milk	Sugar	Onions	Lentils	Rice	Oil (vegetable)
Anbar	AV	AV	WAV	AV	AV	AV	AV	AV
Babil	WAV	WAV	WAV	WAV	WAV	WAV	WAV	WAV
Dahuk	AV	AV	AV	AV	AV	AV	AV	AV
Diyala	WAV	WAV	WAV	WAV	WAV	WAV	WAV	WAV
Kerbala	AV	AV	AV	AV	AV	AV	AV	AV
Kirkuk	AV	AV	WAV	AV	AV	AV	AV	AV
Najaf	AV	AV	AV	AV	AV	AV	AV	AV
Ninewa	WAV	WAV	WAV	WAV	WAV	WAV	WAV	WAV
Qadissiya	AV	AV	AV	AV	AV	AV	AV	AV
Salah al-Din	AV	AV	AV	AV	AV	AV	AV	AV
Sulaymaniyah	AV	AV	AV	AV	AV	AV	AV	AV
Thi-Qar	WAV	WAV	WAV	WAV	WAV	WAV	WAV	WAV
Wassit	AV	AV	AV	AV	AV	AV	AV	AV

The above described fluctuations and the general decrease in price of wheat flour have contributed to a relative increase in purchasing power of the Iraqi population. The cost of the national food basket decreased by -7% from March; this is an improvement compared to the previous month where the price increased by 1% (Chart 2). In terms of availability, the situation is positive across the country (Chart 3).

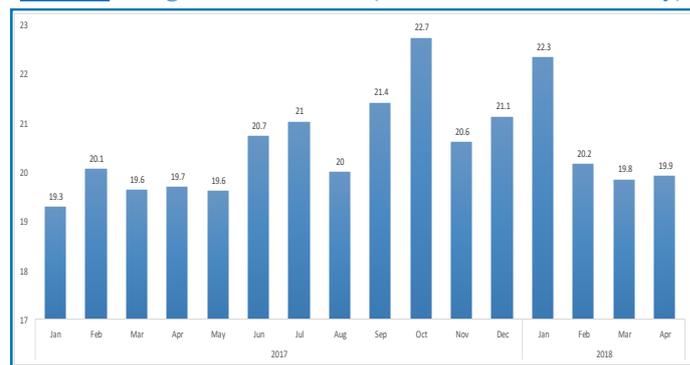

It has also to be considered that no data were collected for Baghdad, Basrah, Erbil, Missan and Muthanna in April. It also must be taken into consideration that averages don't include locations where food commodities are reported as not available or where key informants have not answered the calls (see Methodology).

Unskilled Labour and Wage-to-Wheat Terms of Trade (ToT)

Chart 4: Cost of Unskilled Labour per day (in IQD)

Chart 5: Wage-to-Wheat ToT (in KGs of wheat flour/day)

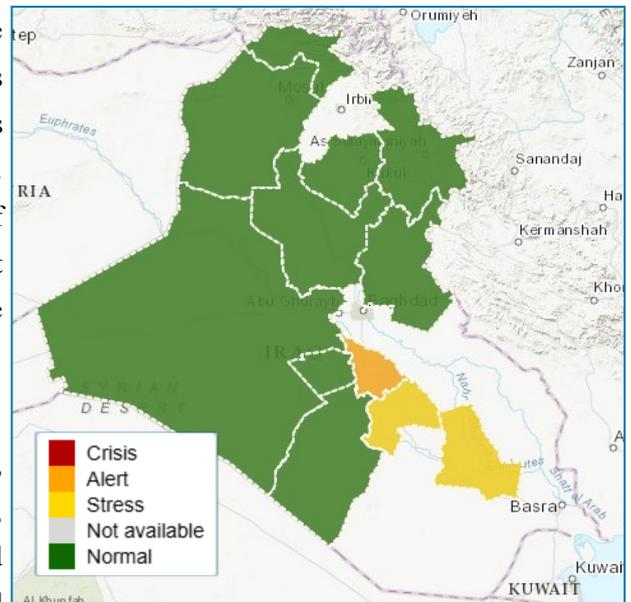

The cost of unskilled labour in April hasn't changed much across the country; with an exception for Babylon where wages decreased by 23%. (Chart 4). Unskilled labor costs was higher than March in Kirkuk and Salah-Al-Din. Wages of casual laborers remained stable in all other governorates. As a consequence of lower wages and decreased costs of wheat flour, the wage-to-wheat terms of trade (ToT) almost didn't change, it marginally increased by 0.5% at the national level (Chart 5).

Alert for Price Spikes (ALPS)

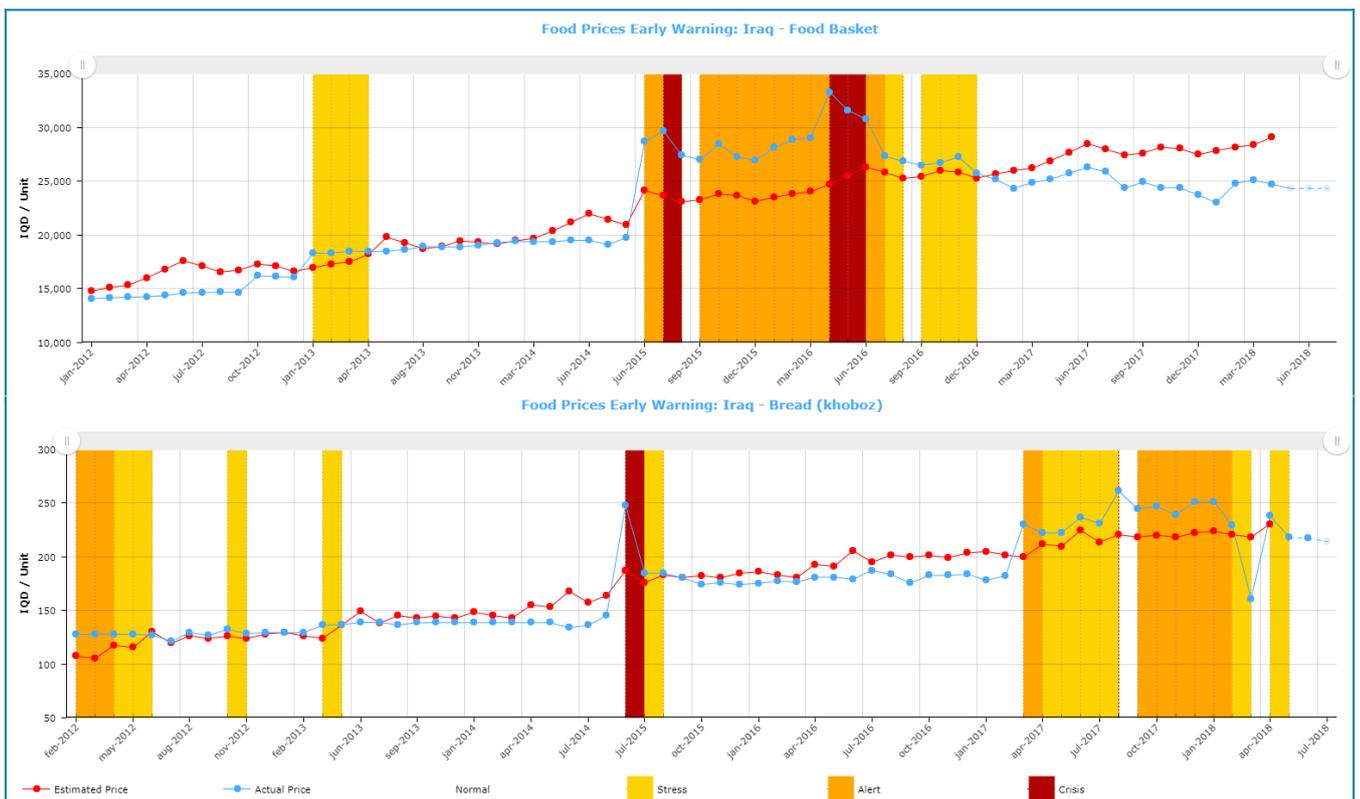

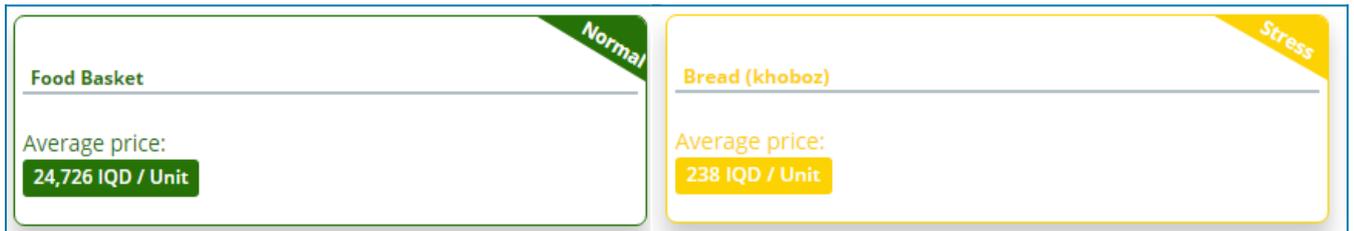

According to the Alert for Price Spikes (ALPS) indicator, the food basket is still at normal level everywhere in Iraq, with exception of Babylon (alert), Quadissyia (stress) and Thi-Qar (stress) when compared to the seasonally adjusted

Map 3: Alert for Price Spikes of food basket in Iraq

index (Map 3). Charts 4b shows the trends of the food basket. The ALPS indicator also provides a 3-month forecast. In this sense, the price of the food basket is expected to decrease slightly in the next quarter. When it comes to specific commodities, as shown in the charts below, khoboz bread price is at stress level. Charts 4b and 4c show the trends of the food basket and khoboz bread. Based on forecast, the khoboz bread price is expected to decrease in the coming months.

Chart 4: Alert for Price Spikes (ALPS) for food basket (b) and khoboz bread (c)

Methodology

Market information is collected on weekly basis by WFP field monitors. Additionally WFP in partnership with Islamic Relief Worldwide (IRW) collects market data remotely through mVAM technology from key informants in those governorates where access is restricted, using telephone interviews. Data are then cleaned and consolidated. Monthly averages are used for the Iraq Monthly Monitor Report. Field monitors collect prices for 23 food commodities, 3 fuel items, 7 hygiene commodities and the cost of unskilled labour. WFP field monitors cover 12 governorates where access is not restricted plus three additional governorates (Kirkuk, Baghdad and Diyala) when the security situation allows. IRW key informants collect market prices of 8 main food commodities and the daily wage of unskilled labour from six hard-to-reach areas in central and northern governorates of Iraq (Anbar, Baghdad, Diyala, Kirkuk, Ninewa and Salah Al-Din) through mVAM technology.

The report is based on the analyses produced by the [Safety Nets Alert Platform \(SNAP\)](#) which replaces the Integrated Market Surveillance Tool (IMST). Through automated analysis, SNAP platform analyzes trends of main food and non-food commodities, minimum food basket, providing an indication of how much the markets are integrated in the country. In addition SNAP produces an early warning indicator (ALPS) with a 3-month forecast for each relevant commodity and at subnational level. Food and non-food prices are analyzed against previous periods. Availability is also assessed.

AV	Available
WAV	Widely Available
SAV	Scarcely Available
MNA	Mostly Not Available
NA	Not Available
DNC	Data not collected

The classification of the availability is based on the monthly averages. A commodity is classified as **Available** when it is found available on every visit in the key market of a specific governorate; **Widely Available** when for only one visit the availability is not full; **Sparadically Available** when in at least half of the visits, the item is recorded as rare in the market; a commodity is **Mostly Not Available** when it was found only in rare cases in a governorate during the analyzed month; finally a item is classified as **Not Available** when it is not found in any market of a governorate at all.

The Alert for Price Spikes (ALPS) is a WFP-developed indicator calculated as follows $ALPS = \frac{Price_{it} - Season_{it}}{\sigma_{\epsilon}}$. It is computed for each month (t) by dividing the difference between the observed and estimated seasonal price of a commodity (i) by the standard deviation of the error term (σ_{ϵ}).

Situation on a given market :	ALPS thresholds :
Normal	$ALPS < 0.25$
Stress	$0.25 \leq ALPS < 1$
Alert	$1 \leq ALPS < 2$
Crisis	$ALPS \geq 2$

The minimum food basket monitored by WFP contains five food commodities. The quantities are adjusted against the survival caloric intake needs. The five commodities are wheat flour (6.75Kg), sugar (1Kg), rice (6.75Kg), vegetable oil (0.9L) and lentils (1.8Kg). The food basket analyzed is the monthly minimum food basket per household.

This bulletin integrates the information provided by the mVAM Flash Updates on specific areas of the country that deserve specific attention. Occasionally the IMST is used to provide customized analyses on hard-to-reach areas. The Iraq Market Monitor Report is issued since August 2016 on a monthly basis.

NOTE: Due to the long-lasting conflict in Falluja and Mosul, and the related impact on markets, to avoid distortions on average prices and maintain consistency over time, the two districts have been removed from the analysis.

An interactive version of the analysis presented in this bulletin, along with additional details, can be found on [SNAP website](#) (click [here](#) to request for an account)
