Indirect support costs	44 965 301	27 640 837	72 606 138

Gender and age marker\* 2A

## **Rationale**

1. Given evolving dynamics in-country, revision five to the DRC interim country strategic plan (ICSP) scales up WFP's response to a rapidly deteriorating humanitarian situation, including greater population displacement, declining nutritional indicators and the effects of the latest Ebola outbreak.
2. Since the approval of the ICSP in November 2017, the humanitarian situation in the country has deteriorated. Intensified conflict in the Ituri, Kasai, Kasai Central, North Kivu, South Kivu and Tanganyika provinces has resulted in an increase in the number of displaced people requiring humanitarian assistance. Population displacement is likely to continue increasing, in view of the presidential elections of December 2018 and their potential to generate further violence in the country.
3. On 6 October 2017, in accordance with the provisions of WFP's Emergency Response Activation Protocol, a WFP Level 3 emergency was declared to respond to the needs of affected people by the conflict in the Kasai region. The Level 3 emergency was expanded on 14 May 2018, to include the Ituri, North Kivu, South Kivu, and Tanganyika regions. Based on the five emergency response criteria and as recommended by a Strategic Task Force held on 12 November 2018, the WFP Level 3 emergency response has been extended until 14 April 2019.
4. Inter-communal violence, forced population movement, disease outbreaks, restricted humanitarian access, poor infrastructure, and reduced access to agricultural lands and markets contribute to an extremely complex humanitarian situation. The emergency food security assessments (EFSAs) carried out by WFP and partners in June 2018 in Ituri, Kasai, Kasai Central, Kasai Oriental, Maniema, North Kivu, South Kivu and Tanganyika showed a doubling of the number of food-insecure people, reaching over 13 million in 2018.

5. The tenth Ebola virus disease (EVD) outbreak in DRC was declared in August 2018 and has affected more than 500 people, likely to increase well into 2019, exceeding any previous outbreak in DRC. A potential spread to other parts of DRC and to neighbouring countries is ranked as “very high” by the World Health Organization (WHO) which will have a negative impact on food and nutrition security.
6. A nutrition survey conducted by the Government of DRC and the United Nations Children’s Fund (UNICEF) in December 2017 demonstrated that children’s nutrition has deteriorated dramatically. Global acute malnutrition (GAM) prevalence is reaching emergency thresholds in some areas of Greater Kasai at over 10 percent, with severe acute malnutrition (SAM) as much as 4 percent. Additionally, mortality rates for children under age five were above emergency thresholds<sup>1</sup> in 46 percent of the surveyed health zones. Based on the EFSA conducted in June 2018, Ituri, Kasai, Kasai Central, Kasai Oriental, Maniema, North Kivu, South Kivu and Tanganyika, there are an estimated 4.6 million malnourished children.
7. Trend analysis and existing empirical evidence suggest that the nutrition situation in DRC has continued to deteriorate, with the onset of the ‘lean season’. WFP’s current plan covers about 25 percent of the estimated nutrition response requirements.
8. This fifth revision to the DRC ICSP responds to a deteriorating humanitarian situation across the country, and increases the total number of beneficiaries targeted by WFP by 5 million to 11.8 million over its full 2018–2020 duration.
9. Under outcome 1, the delivery of assistance to shock-affected households through activity 1 will reach an additional estimated 3.3 million beneficiaries, in accordance with the EFSA’s carried out in the L3 provinces and the extension of the L3 until mid-2019. The scale of activity 2 will support an additional 119,400 acutely food-insecure people affected by the Ebola outbreak in North Kivu and Ituri, reflecting the 2018 Ebola Strategic Response Plan. These adjustments will be accompanied by a scale-up of on-demand services via Activity 10 of strategic outcome 5.
10. Interventions to treat and prevent acute malnutrition (activities 3, 4 and 5 of strategic outcome 2) will be expanded to target an additional 2.2 million beneficiaries, in response to considerably higher needs than earlier anticipated.
11. Under strategic outcome 3, a cash transfer modality will be included for an estimated 13,000 smallholder farmers. Livelihood support under activity 7 will be scaled up by an estimated 470,000 beneficiaries in line with the joint WFP/FAO strategy to increasingly shift towards longer-term conditional interventions and in response to additional funds received against this activity.
12. Efforts invested by WFP during 2018 have resulted in good funding levels, almost tripling resources available compared to 2017. Established donors have responded positively, new donors have been brought on board and these trends are expected to continue in 2019. During 2018, the country office secured USD 383.6 million, covering approximately 85 percent of funding requirements of this revision. Preliminary forecasts amounting to approximately USD 37 million have been identified for 2019, of which approximately USD 34 million is earmarked for crisis response. There is confidence that donors will fully meet WFP’s Ebola-related funding requirements.

---

<sup>1</sup> Greater than 2 deaths per 10,000 children per day.

## **Changes**

### **Strategic orientation**

13. No changes are being made to the strategic orientation of the ICSP through this revision.

### **Strategic outcomes**

14. No new strategic outcomes are being added to the ICSP. The revision seeks to scale-up WFP's response within strategic outcome 1, 2, 3, 4 and 5.

### **Strategic outcome 1 – Targeted food-insecure populations affected by shocks in DRC are able to meet their basic food requirements in times of crisis**

15. Following the widespread conflict and resulting displacements, WFP will scale-up food and cash-based transfer (CBT) assistance to an additional 3.4 million conflict-affected populations who experience acute food insecurity under activity 1.
16. The revision will also increase activity 2 to accommodate an Ebola response for an estimated 119,000 people in line with the strategic response plan and scenario planning projections. WFP food assistance is designed, planned and implemented in line with the DRC "National Plan for the response to the Ebola virus disease epidemic in North Kivu Province".

### **Targeting approach**

17. For activity one, WFP will scale-up its response in L3 classified provinces, coupled with results from the updated emergency food security assessments, planned for early 2019. Within the health zones and territories, WFP will work with partners to identify vulnerable households. Internally displaced people (IDP), returnees, disabled persons and vulnerable host families will be prioritized.
18. The targeting for the Ebola-affected populations will be carried out in conjunction with the Ministry of Health and WHO in North Kivu and Ituri provinces as part of the response plan.

### **Transfer modalities**

19. WFP will continue to use a combination of in-kind food and CBT transfer modalities under activity 1. No changes to the composition and size of the ration will be made through this revision.
20. WFP will provide food to Ebola-affected people, caregivers, survivors and contacts to limit population movements under activity 2. Assistance to affected households and communities will be delivered according to three pillars: "care, contain and protect".
21. The "care" pillar primarily targets confirmed and suspected cases in health facilities receiving medical care and aims at sustaining their nutritional status and complementing therapeutic protocols. Under this pillar, beneficiaries receive hot meals prepared from dry rations.
22. The "contain" pillar primarily targets registered contact cases and contributes to mitigating the risk of the spread of the virus. Household rations will be provided to families of Ebola patients for the duration of the 21-day period of observation. Health workers will also be provided with a ration as an incentive for their support in combatting the epidemic.

23. The “protect” pillar targets discharged suspected cases, Ebola survivors and their families supporting their reintegration in communities. The scale up of nutrition assistance to pregnant and lactating women and girls (PLWG) as well as children aged 6–59 months in the EVD most affected areas is also envisaged under this pillar.<sup>2</sup>

### ***Partnerships***

24. WFP will continue to expand its partnerships to support the scale-up of food and CBT assistance under activity 1, and to support the WFP Ebola response, focusing in particular on complementarity of response with United Nations sister agencies and enhancing capacity of local non-governmental organizations (NGOs) such as CARITAS. The partnerships with the Ministry of Health and WHO have risen to prominence through the Ebola crisis, and will require continued investment by WFP.

### ***Country office capacity***

25. WFP will augment its staffing complement in line with the scale-up of activities 1 and 2. In the L3 classified provinces, where food and CBT assistance will be scaled up, WFP will recruit additional staff with experience in cash-based programming.
26. Programme and supply chain staff presence has been augmented in North Kivu and particularly in Beni, where the epicentre of the Ebola outbreak exists. In Ituri and in Goma, WFP will strengthen capacity for the response through surge capacity in preparedness and mobile teams to support the response as required.

### **Strategic outcome 2 – Food-insecure and vulnerable populations in conflict and shock-affected areas have improved nutritional status in line with national protocols by 2021**

27. Through this revision, WFP will scale-up moderate acute malnutrition (MAM) treatment (activity 3), prevention of acute malnutrition (activity 4) and prevention of chronic malnutrition (activity 5) to address the increased nutritional needs in the country. The increase reflected in this revision largely accounts for the scale-up in the Kasai region which was not planned in the initial design of the ICSP. The nutrition response as reflected in this revision is being implemented and will continue until December 2019 in line with the 2019 Human Response Plan (HRP).
28. Due to the complex humanitarian situation, the high prevalence of acute malnutrition and associated outcomes in a highly populated area, this revision increases the scale of the management of acute malnutrition in children 6–59 months and PLWG by two-fold from the original plan to accommodate the response in the Kasai.
29. A key change in the nutrition response from the design of the ICSP is the introduction of CBTs for the prevention of chronic malnutrition (activity 5) through maternal and child cash transfers (MCCTs), targeting PLWG. Cash will be provided in those areas

---

<sup>2</sup> The enhanced general food ration is designed to meet the full caloric and micronutrient requirements of beneficiaries through the inclusion of Supercereal and Plumpy'sup. Confirmed and suspected cases receiving medical care in Ebola treatment centres (ETCs) are provided with daily nutritious food for the duration of the treatment. The ration and type of food and nutrition products provided to each patient depend on the current stage of the patient illness and the age of the patient. WFP provides dry food rations and nutrition products to the ETCs where managing partners cook hot meals. Discharged suspected cases (negative case) receive a one-month family dry food ration as they exit the ETC, as part of a reintegration package. EVD survivors receive a family monthly dry food ration for the duration of one year, this ration is complemented by Plumpy'sup (children) and Supercereal (adults) for the first 3 months over the 12 months. EVD contacts receive a one month family size food ration (broken down into 4 weekly distributions), during their 21-day periods of observation. Health workers and other frontline personnel receive monthly dry food ration.

where it is feasible, and in-kind modalities will be used in the remaining localities. As part of the MCCT approach, village leaders, the community and husbands will be sensitized on the importance for women to receive the cash directly as this has an impact on their nutritional status as well as the nutritional health of children.

### ***Targeting approach***

30. WFP will prioritize areas with Integrated Phase Classification (IPC) 3 or 4, GAM rates greater than 10 percent, high risk of young children's mortality and morbidity and limited access to health services for the nutrition response. To support complementarity with other interventions, priority areas will also include those where WFP is providing food and cash assistance and where UNICEF is providing treatment of SAM.

### ***Transfer modalities***

31. Under activity 3, for MAM treatment there have been no changes to the ration across any of the beneficiary groups.
32. For activities 4 and 5, prevention of acute malnutrition and chronic malnutrition, WFP has aligned the commodities with government protocol. Plumpy'sup will no longer be provided in-country and instead a daily ration of 50 g Plumpy'doz will be used. In 2019, WFP will provide CBTs to PLWG under activity 5 to help them diversify their diets, and access other household items necessary for health and nutrition. The transfer value for CBTs, within this activity, is estimated at USD 0.67 per person per day.

### ***Partnerships***

33. The delivery of WFP nutrition interventions will be done through government health centres to ensure that services are integrated within the national health system. Treatment of MAM, will be implemented in line with national protocol.
34. For the effective implementation of prevention of acute malnutrition, WFP will support the establishment of "multi-sectoral preventive platforms" in targeted areas. These platforms will enable delivery of complementary services to affected populations by partners in different sectors to address the immediate and underlying causes of malnutrition.

### ***Country office capacity***

35. WFP has expanded its nutrition capacity within the country in response to the scale-up and will continue to provide technical assistance to the Government and build the capacity of its partners to strengthen the quality of nutrition assistance implementation.

## **Strategic outcome 3 – Smallholder farmers and vulnerable communities in targeted and crisis-prone areas, especially in eastern DRC, enhance their productive livelihoods and improve their food security and resilience by 2021**

36. Under activity 6, WFP planned to provide conditional cash transfers to support farmer organizations' financial capital for 13,452 beneficiaries. The recent multi-sectoral assessment recommends that in-kind is the most appropriate transfer modality in Nyunzu and Kabalo territories. This recommendation is made based on the volatile security context, the absence of financial service providers and a weak market capacity, unable to absorb the cash.
37. WFP will scale up the number of people benefitting from food assistance for assets (FFA) and cash assistance for assets (CFA) under activity 7 to support the joint

WFP/FAO strategy to shift from relief assistance towards longer-term interventions across the humanitarian–development–peace nexus. The scale-up is required to enable returnees, IDPs and local communities in rural households to invest in agriculture livelihood opportunities and improve self-reliance. The scale up is also related to additional donor funding received against this activity.

### ***Targeting approach***

38. FFA will be used to promote community resilience. Geographical areas are identified based on an analysis of food insecurity using geographical targeting tools such as the IPC. Project selection employs community-based participatory processes while participants in asset creation activities are selected by their communities based on vulnerability. Since 2017, WFP DRC has adopted the Three-pronged approach (3PA), combining Integrated Context Analysis (at provincial level) with Seasonal Livelihood Programming (SLP) at the territory level and the Community-based Participatory Planning (CBPP), in order to analyse and design the activities in support to smallholder farmers and resilience building. An estimated 45 percent of targeted households will be headed by women, while 50 percent of beneficiaries will be women.

### ***Transfer modalities***

39. The food transfer under activity 6 will be the same as the FFA ration which is composed of 120 g of beans, 400 g of maize, 5 g of salt and 30 g of vegetable oil.
40. The transfer modalities under activity 7 will remain as planned. Beneficiaries will receive a daily ration of 400 g of cereals, 120 g of pulses, 30 g of vegetable oil and 5 g of salt when they engage in asset creation activities. In areas where CBTs are the most feasible and cost efficient transfer modality, the transfer value will be determined based on the market value of the ration. On average in DRC this transfer value amounts to USD 0.50 per person per day.

### ***Partnerships***

41. WFP will continue to integrate FFA interventions with smallholder value chain development to develop resilient livelihoods for women and men. WFP will work with FAO and partners to build assets that will strengthen community resilience to natural shocks and promote economic recovery by rehabilitating gender-transformative social and productive infrastructure. Asset creation/rehabilitation will focus on wetlands reclamation, construction of small bridges and the rehabilitation of feeder roads to facilitate commodity evacuation, aggregation and trade.

### ***Country office capacity***

42. WFP will increase its staffing capacity to expand and reach more communities with FFA activities as illustrated by the scale up in this revision. However, the level of insecurity in some targeted areas may limit access to the targeted populations.

## **Strategic outcome 4 – National institutions in the DRC have strengthened capacity to reduce food insecurity and malnutrition and respond to shocks by 2021**

43. Through this revision WFP will integrate, into activity 8, the multi-stakeholder partnership project for Supply Optimization through Logistics Visibility and Evolution (SOLVE). This initiative is funded by the Bill & Melinda Gates Foundation (BMGF) and aims to accelerate on-the-shelf availability of health commodities through

sustainable solutions across 17 countries<sup>3</sup> over a period of three and a half years (2017-2020). SOLVE partners include The Global Fund to Fight AIDS, Tuberculosis and Malaria, the United Nations Population Fund (UNFPA), BMGF and WFP among others.<sup>4</sup>

**Strategic outcome 5 – The humanitarian community in the DRC have the capacity to effectively respond to shocks through strategic partnership by 2021**

44. With the Ebola outbreak in the country, there is a need for WFP to increase its on-demand service provision portfolio under strategic outcome 5. There is an increased need to provide service logistics and emergency telecommunications services to WHO, the Ministry of Health, and other partners who are supporting the Ebola response.
45. WFP will increase storage capacity in Beni and Butembo, as well as in other locations, as the outbreak evolves. Where there are no available leasable storage facilities, mobile storage units (MSUs) will be procured, as well as other equipment needed for the response, such as power light towers and generators, which will be ordered and positioned in several locations in readiness for response.

***Cross cutting supply chain challenges***

46. Supply chain challenges remain unchanged since the start of the ICSP. These include the high supply chain costs, especially in-country transport costs, because of the remote locations in which WFP is implementing its programmes and the poor state of transportation infrastructure.
47. Equipment that will be required to support the Ebola response will be sourced from the United Nations Humanitarian Response Depot (UNHRD) and pre-positioned in Goma or in neighbouring countries.

***Monitoring and evaluation***

48. There will be no changes to WFP's monitoring and evaluation strategy as a result of the scale-up of activities introduced through this revision. The strategy will continue to emphasize the measurement of long-term impacts on food insecurity and malnutrition.

***Accountability to affected populations, protection, risks, restrictions of gender and disabilities***

49. Cash transfers under the prevention of chronic malnutrition will target women and will be accompanied by complementary social behaviour change communication (SBCC) messaging, targeting the entire community (comprising of men, women, adolescents, boys and girls), on nutrition and on information on gender-based violence (GBV) mitigation and response measures. Steps will be taken to ensure that women receiving the transfers are safe and have access to a feedback and complaints mechanism to report challenges, including GBV.
50. Awareness-raising campaigns on the link between gender equality and nutrition will be conducted and include targeting of men and boys, notably on their responsibilities regarding their nutrition and that of their children. WFP will also provide technical

<sup>3</sup> Ethiopia, DRC, India, Kenya, Nigeria, Pakistan, the United Republic of Tanzania, Uganda, and the Ouagadougou Partnership (Benin, Burkina Faso, Côte d'Ivoire, Guinea, Mali, Mauritania, the Niger, Senegal, Togo)

<sup>4</sup> African Resource Centre for Supply Chain, Kühne-Stiftung, Plaster Group, E2open, Reproductive Health Supplies Coalition, FP2020

support to the Government to advocate for the integration of a gender lens into nutrition-related national frameworks, policies, and legislation.

***Proposed exit strategy:***

51. WFP will continue to monitor the food security and nutrition situation in the country. In areas where improvements are observed, emergency acute malnutrition prevention and treatment activities will be scaled down.
52. As part of the overall joint WFP-FAO strategy to shift from relief assistance towards longer-term interventions to support the recovery and rehabilitation of rural livelihoods in coordination with FAO agricultural inputs provision, WFP will, where feasible, initiate resilience-building activities in the targeted locations to ensure that the affected population's food security and longer-term livelihood situation improves.
53. Food assistance provided to respond to the Ebola outbreak will be phased out as soon as the outbreak has ended. However, acknowledging that DRC is prone to such outbreaks, WFP will continue to work with the Government and humanitarian community to enhance preparedness and agility to respond when such outbreaks occur. WFP will hold stocks of mobile storage units, and other equipment, in locations within the country or neighbouring countries, to ensure that these can be made available as required.

***Security and other risks***

54. The greatest risk in DRC is contextual in nature and related to the political instability and limited government capacity to ensure basic service delivery, which affects access to the vulnerable population and limits the level of the government's engagement in delivering humanitarian assistance. The presidential election which is planned for December 2018, could potentially result in further deterioration in the security environment. WFP will continue to involve national and provincial authorities in the design and implementation of its programmes, which will help to ensure their commitment to provide support. Furthermore, strengthening partnerships with national and international organizations at the grassroots level will facilitate access to the target locations, and enhance WFP's ability to deliver the planned food assistance interventions.

***Beneficiary analysis***

55. This revision will increase the number of beneficiaries under activities 1, 2, 3, 4, 5, 6 and 7 as a result of the expansion of WFP's food assistance programmes in DRC. Under activity 6, an estimated 13,400 beneficiaries have been included to reflect the original project design of this activity. An estimated 68 percent of the overall CSP beneficiaries are women, adolescent girls and girls.

TABLE 1: DIRECT BENEFICIARIES BY STRATEGIC OUTCOME, ACTIVITY AND MODALITY

## Cost breakdown

56. With this budget revision, there is a significant increase in the transfer costs, as well as in implementation costs. The transfer costs have increased from USD 191,829,902 to USD 332,052,057. And the biggest increase is within 2018 and 2019, as the country office scales up its operations to meet the increased needs. Transfer costs represent 30 percent of the budget and implementation costs make up 8 percent. Direct support costs (DSC) have increased USD 1 488 050 and this cost is associated with the increase in senior staff, mainly with the inclusion of a second deputy country director position, as well as a senior external partnership position. WFP in DRC has over the past three years been able to maintain approximately 60 percent of its funding needs. This trend was maintained in 2018, where the country office has managed to have over 60 percent funding.
