# Summary

In 2018, WFP's operation in Cameroon was the first in the region to transition to the country strategic plan (CSP) until 2020. The CSP provided a new planning and integrated SDG 2 and 17 frameworks to strengthen WFPs capacities in emergency, recovery and development responses. Cameroon took a community-led approach to address emergency needs, combining with early recovery and resilience building to fight against hunger. The emergency support was followed up with livelihood recovery and rebuilding that demanded a flexible approach, using conditional or unconditional transfers of cash-based transfers (CBTs) or food, seasonal support and food assistance for assets (FFA). The nutrition needs of women and children were integrated into food assistance provided to the most vulnerable people in Cameroon, operated through school feeding and the prevention of acute malnutrition.

WFP faced challenges from the political environment, funding and operations. Refugees were crossing the borders into Cameroon accompanied with an increasing number of internally displaced persons (IDPs) affected by North West and South West crisis. Access to project sites in the far North, North West and South West regions remained primarily limited by security concerns.

The CSP focused on crisis response, resilience building, partnerships and strengthening national capacities for addressing the root causes of food insecurity and malnutrition of the IDPs which were impacted by the internal crisis in the North West and South West regions. WFP allocated resources and launched operations on the ground to reach the displaced from these regions.

In 2018, WFP targeted and supported vulnerable and conflict-affected food insecure Cameroonians including refugees from Nigeria and Central African Republic, IDPs, and local host communities and returnees.

A targeted strategy for assistance to Central African Republic refugees was finalized in partnership with the United Nations High Commissioner for Refugees (UNHCR), enhancing verification of refugees at the household level and limiting inclusion and exclusion errors. WFP, the Ministry of Agriculture and International Red Cross chaired the Cash and Working Group (CWG) continued the coordination of food security-related programmes through working groups (GTSA) while reinforcing the capacity of the local government.

Four community action plans were developed in 2018 through community-based participatory planning (CBPP) identifying the local needs and preferred response strategies of beneficiaries. Four rounds of mid-upper arm circumference (MUAC) screenings were also conducted door-to-door in the communities where WFP carried out prevention of acute malnutrition activities.

In 2018, WFP focused on strengthening and enhancing the roles of gender, protection and accountability to beneficiaries. WFP staff and implementing

partners strengthened capacities through training, development and dissemination of tools and guidelines. Technical support and training was carried out for government agencies, partners and community implementers around topics including food security data collection and analysis, FFA, and infant and young children feeding (IYCF) practices.

# Context and Operations

In 2018, Cameroon was classified as a lower-middle-income country with 37.5 percent of the total 24 million population living below the national poverty line [1]. Despite slight improvements on the Global Hunger Index, Cameroon ranked 71 out of 119 countries with a score of 21.1 [2] indicating the level of hunger as 'serious'. WFP in 2018 rolled out with the Country Strategic Plan (CSP), through a community-led approach to address emergency response, early recovery, and resilience building coherently to combat the complex and escalating crises in the country towards the Sustainable Development Goal (SDG) 2.

The Global Humanitarian Overview (GHO) 2019 highlighted that humanitarian needs increased significantly in 2018, with 4.3 million people (30 percent increase) in need of assistance, most of them women and children. Out of which, 2.8 million were severely affected and 340,000 children aged 6-59 months suffered from acute malnutrition, requiring immediate action to address food insecurity. Additionally, from the most vulnerable regions 161,600 children were provided treatment of moderate acute malnutrition (MAM) and 62,200 children suffered from severe acute malnutrition (SAM). In 2018, the highest global acute malnutrition (GAM) rates of 9.7 percent and 5.9 percent were observed in the Far North and North regions. Overall, 2.3 million people were targeted by humanitarian organizations, which was 77 percent more than 2017.

The rising demand for humanitarian assistance was mainly due to the multifaceted and intertwined crises Cameroon was confronted with. The conflict in North East Nigeria and bordering areas in the Far North region of Cameroon; increasing influx of refugees from Central African Republic (CAR) with 267, 813 refugees that fled to eastern Cameroon; and escalating conflicts in the North West and South West regions. The influx created significant pressure on natural resources and basic social services in the host areas, increasing pre-existing vulnerabilities.

In November 2018, the United Nations High Commissioner for Refugees (UNHCR) reported that the conflict by non-state armed groups in North East Nigeria had forced 101,404 Nigerian to seek refuge in Cameroon, and 99,489 in the Far North region. The conflict by the non-state armed groups also resulted in 227,581 internally displaced persons (IDPs) struggling to survive in strenuous conditions in villages or small towns. The Far North region is predominantly arid and regularly prone to droughts and seasonal floods and the basic services are more limited than in other regions of the country.

Since October 2017, the tension and violence in the North West and South West have deteriorated drastically and affected the normal livelihood and production activities and resulting in population displacement. Towards the end of 2018, due to the unrest of an estimated 27,877 Cameroonians [3] fled to Nigeria, and up to 437,000 persons [4] IDPs, with approximately 20 percent seeking safety in the

West and Littoral regions. In 2018, WFP provided immediate food assistance to refugees from Nigeria and CAR, as well as IDPs, returnees and local communities throughout the year during or after crises.

In contribution to SDG 2, strategic outcome 1 focuses on providing effective crisis response to refugees, IDPs and crisis-affected communities facing food insecurity. Strategic outcome 2 provides an early recovery linked to resilience-building approach that supports the livelihoods of refugees, IDPs and host communities in protracted crises while building their resilience. Strategic outcome 3, aims at preventing malnutrition and contributes to the long-term resilience of individuals, households and communities. Strategic outcome 4, aims at building the long-term resilience of smallholder households and communities living in stable areas of the CSPs four target regions. Strategic outcome 5, focuses on the partnerships and strengthening national capacities for addressing the root causes of food insecurity and malnutrition. Lastly, under SDG 17 strategic outcome 6 focuses on UNHAS services, technical expertise and capacity building for government and other partners (such as sensitization and counselling service to caregivers and health workers) and providing a common platform to convene complementary services from other actors to strengthen humanitarian assistance synergies and social protection systems.

# Programme Performance - Resources for Results

The three-year Country Strategic Plan (CSP) had an estimated budget of USD 65 million which met 83 percent of the programme needs. In 2018, 40 percent of the budget reflected the overall requirements for the first year.

WFP received contributions from various donors which enabled WFP to provide emergency relief to meet increasing food needs of vulnerable people affected by the Lake Chad Basin and Central African Republic (CAR) crises. In addition, WFP interventions contributed to the resilience building and nutrition support provided to children and women. A timely support of USD 2.4 million from funding pools including the United Nations Central Emergency Response Fund (CERF) allowed WFP's immediate response to food insecure IDPs fleeing conflicts in the North West and South West regions in November 2018, which was the first humanitarian assistance provided to IDPs in the crisis-affected regions.

Multilateral funding, allowed WFP to provide emergency food assistance to refugees, assets creation for livelihood recovery and community resilience, and nutrition support to children and women. Funds were also raised through the ShareTheMeal application, which engaged smartphone users around the world to fund WFP's school feeding programme in Cameroon.

The severity of the food insecurity among crisis-affected populations under CSP strategic outcome 1, prompted donors to continue allocating their contributions to humanitarian and early recovery programmes. More than half (52 percent) of resources available in 2018 went to emergency relief activities through both in-kind and cash transfers. However, for refugees and host communities affected by the CAR crisis, funding shortfalls led to a 25 percent reduction of the standard food ration provided in the eastern regions to 110,000 vulnerable people. Development initiatives of CSP strategic outcome 2 also experienced funding shortfalls in 2018, particularly the school feeding programme in the Far North region.

In 2019, WFP will continue to strengthen communication efforts with media and donors, raise awareness of resourcing requirements and demonstrate the impact of WFP operations in life-saving and livelihood-building.

# Programme Performance

## Strategic Outcome 01

Populations affected by disasters including refugees, IDPs, returnees and host populations in Cameroon have safe access to adequate and nutritious food during and after crises.

Strategic outcome 1 focused on assisting refugees from Nigeria and Central African Republic (CAR) fleeing conflicts in their countries. Internally displaced persons (IDPs), uprooted by non-state armed group attacks in the Cameroon-Nigeria border, returnees and host populations in the four priority regions of the Far North, North, Adamawa and East also received food assistance during and after the crisis to meet their basic food and nutrition needs.

According to the Comprehensive Food Security and Vulnerability Analysis (CFSVA 2017) the Far North region suffered from the highest rates of food insecure households at 33.7 percent (approximately 1,460,000 people) in the region. In 2018, 54,379 Nigerian refugees in the Minawao camp received a 100 percent food basket of 2100 kcal/day which consisted of sorghum, pulses, salt, oil and split peas year-round. The arrival of IDPs in food-insecure areas severely affected host communities. The non-state armed group attacks disrupted the economic, agricultural, and pastoral activities in the Far North region (Logone-and- Chari, Mayo Sava, and Mayo Tsanaga divisions), which caused a depletion of livelihoods and household assets. WFP assisted 55,848 vulnerable people in the Far North (46,443 IDPs and 9,415 host population) with a full general food distribution package that includes complementary specialized nutritious food (SNF) for children aged 6-23 months as well as pregnant and lactating women (PLW). WFP worked closely with other United Nations agencies, government ministries, NGOs and civil society organizations to ensure that vulnerability-based targeting accounts for age, gender, disability and diversity, including children, women-headed households, and persons living with disabilities among others. Distributions were monitored by both women and men enumerators. In 2018, WFPs distribution results showed that 70 percent of the Nigerian refugee households received general food assistance and reached acceptable food consumption scores (FCS). In May 2018, an increase of 9 percent, of IDPs reached an acceptable FCS, while in August there was a 45 percent decline and further decline of 42 percent in October. Therefore, in August, households and more precisely IDPs were negatively affected by the lean season, and the poor food availability during the 2018 crop season. Furthermore, around 53 percent of IDPs reported sharing the food ration/transfer with non-beneficiaries.

In the East and Adamawa regions, 113,831 refugees from CAR in Lolo, Timangolo and Mbile camps as well as out-of-camp refugees and local vulnerable populations were supported through cash-based transfers (CBT) and in-kind food distributions with a 75 percent food basket. According to the CFSVA, the population of Adamawa, 5.5 percent and the East 14.6 percent in the were food

insecure, as host communities have to co-exist with refugees, stretching limited resources, which increased local vulnerability. The introduction of CBT in Adamawa in August met the nutrition intake of households with low FCS, improving the proportion of beneficiaries with acceptable food consumption by 77 percent in November (CBT 87 percent and in-kind 67 percent). While, in August the proportion of food consumption was at 41 percent.

In 2018, due to funding shortfalls WFP reduced the food ration provided to 100,000 extremely vulnerable CAR refugees in East and Adamawa. In 2019, 100 percent rations will transition to improve the food and nutrition status providing funding availability.

In November 2018, most of the beneficiaries were satisfied with the reported positively regarding distribution management (94 percent), targeting (89 percent), sensitization (86 percent), and food quality and quantity (74 percent). However, in the East region, the proportion of beneficiaries with acceptable food consumption decreased from 93 percent in November 2017 to 73 percent in November 2018. The reduction of the food rations and utilization of food was reported that more than 40 percent of the beneficiaries are sharing food assistance received with non-beneficiaries.

For CAR refugees in the East region, after a slight decrease (from 80 percent in November 2017 to 69 percent in May 2018), the percentage of households with acceptable food consumption reached 82 percent in August 2018, and 80 percent in October.

In the Adamawa region, the percentage of CAR refugees' households with acceptable food consumption increase from 41 percent in August 2017 (in-kind) to 77 percent in November 2018 (CBT 87 percent; in-kind 66.7 percent).

The increase of the FCS in East and Adamawa regions observed in August and November 2018 was linked to the regular frequency of the distribution with a food basket at 75 percent. In addition, the launching of CBT modality in Adamawa demonstrated that the food consumption reached 87 percent of households with acceptable food consumption in the fourth quarter.

However, monitoring of food prices revealed a rise in most consumed food, including meat (14 percent), oil (7 percent), cassava (7 percent), which led to the deterioration of the fragile food status of the beneficiaries.

Lastly, under activity 1 of the CSP, WFP included through a revision an in-kind food assistance to 61,759 food insecure women, men, boys and girls displaced by unprecedented socio-political crisis in the North West and South West regions in 2018.

## Strategic Outcome 02

Vulnerable households in protracted displacement and communities at risk in chronically food-insecure areas have safe year-round access to adequate and nutritious food, and increase their resilience to shocks.

Strategic outcome 2 targeted vulnerable food-insecure households in protracted displacements and at-risk communities impacted by crisis in the four priority regions of the Far North, North, Adamawa and East. In collaboration with the Government, other United Nations agencies and local and international NGOs, WFP implemented a community-focused approach through interventions that enabled IDPs, refugees, returnees and host populations to sustain their assets and re-establish their livelihood to reduce shocks and build resilient and independent communities.

The activities implemented in 2018 included school feeding programmes which aimed at increasing retention and reduce absenteeism in primary schools in districts impacted by crisis in the Far North region, targeted food assistance to food-insecure host populations during the lean season, food assistance for asset (FFA) creation to support early recovery and FFA for the creation of productive assets and community market infrastructures to support environmental protection in targeted communities.

School feeding activities were implemented in partnership with the Ministry of Basic Education. School meals were provided to 76,000 pupils (32,889 girls and 43,111 boys) in 134 primary schools from the most vulnerable communities affected by food insecurity, poverty and malnutrition. Global acute malnutrition (GAM) rates were high in the three divisions, which were the most affected by the Boko Haram crisis in the Far North region. Punctuality, regularity and stability of students' attendance in WFP assisted schools were much higher compared to non-assisted schools in 2018, with an increase of 21 percent (20 percent for boys and 22 percent in girls) in enrollment rate. The attendance rate also improved, rising from 94 percent to 97 percent for boys and 94 percent to 96 percent for girls from January to June 2018. In addition to providing school meals to students, WFP organized capacity strengthening sessions for 156 participants, including 17 women on school canteen management and sustainability. The community participation played a significant role in the day-to-day management of the school meals provided.

The FFA harvested products in the communities from Mayo Sava and Logone-and-Chari divisions were reserved for school feeding to complement food basket with fruits and vegetables. In addition to food assistance, complementary services through sensitization campaigns (health, WASH, malaria prevention, micronutrient supplementation) with government and humanitarian actors were delivered as well. Non-food items such as water recipients to prevent

cholera were also provided in schools. However, the insecurity and poverty in the region hampered the economic activities, thus reducing the community contribution to the school feeding programme. As a result, 92 schools remain closed and the number of teachers were still insufficient.

During the lean season, from May to October, targeted seasonal food assistance was provided to 19,893 beneficiaries in 6 divisions (Logone-and-Chari, Mayo Sava, Mayo Tsanaga, Diamare, Mayo Kani, and Mayo Danay) in the Far North region with the support of local cooperating partners, an achievement rate of 99 percent. The post distribution monitoring (PDM) reports showed that the assistance improved beneficiary food consumption by maintaining the percentage of households with poor FCS at 4.50, with a target established at below 10.

An improvement in nutrition was also observed as the food assistance increased the consumption of micronutrients-rich food groups. Households that consumed heme iron-rich food reached 16.80) while the percentage of households that consumed food rich in Vitamin A reached 22.7 percent. Beneficiaries also gave positive feedback about WFP assistance mechanism, targeting (92 percent), distribution process and management (92 percent), food quality (79 percent) and beneficiary sensitization (73 percent).

Meanwhile, food assistance for asset (FFA) activities were carried out in 22 communities in Northern and Eastern Cameroon reaching 64,500 beneficiaries (54,500 through in-kind modality and 10,000 with CBT) and covered various aspects such as rehabilitation and construction of 2,416 ha of farm lands, 44 market sheds, 27 wells, 1,700 meters of irrigation canals, 8.5 km of rural tracks, 13 fish ponds, 9 artificial ponds and 120 bee hives. The assistance contributed to reducing negative coping strategies adopted by the beneficiaries.

In 2018 PDM reports revealed a significant improvement on livelihood-based coping strategies, percentage of households that did not engage in livelihood-based coping strategies remained at 57 percent. Furthermore, 83 percent of beneficiaries in targeted communities in the East and 94 percent in the Far North benefitted from the livelihood assets built during FFA activities. However, given that this newly approved CRF indicator (proportion of the population in targeted communities reporting benefits from an enhanced livelihood asset base), should be collected, analyzed and reported annually, 2018 was used as a baseline.

Four community-based participatory plans (CBPP) were carried out in the Far North, North, Adamawa and East regions, enhancing programming and creating a basis for activities in 2019 and for a longer-term engagement. A management committee consisting of five men and five women were set up in each village to ensure project continuity. These committees monitored activities in their area,

mobilized labour force and participated in the farm land negotiation. Land tenure agreements were signed to ensure the availability of land for three to five years with the possibility of renewal. Furthermore, the Integrated Context Analysis (ICA) for Cameroon was finalized, identifying the priority intervention areas and informed programmatic responses.

The FFA contributed to woman empowerment by specifying assignments within capacity to women by providing water to beneficiaries working at project sites. As a result, 52 percent of the 64,500 beneficiaries reached in 2018 was female.

Despite the advancements registered this year in FFA activities in all the regions concerned, several challenges were encountered leading to non-achievement of some the programme objectives. Adding to unfavourable weather conditions, some disruptive community events and unstable security environment, the main shortcoming was due to lack of performance from cooperating partners who seem to have difficulties to work without WFP support and supervision.

### Strategic Outcome 03

Children aged 6–59 months and vulnerable women and men in food-insecure prioritized districts have reduced malnutrition rates in line with national standards by 2020.

WFP through the strategic outcome 3 focused on implementing a nutrition response programme through the prevention of malnutrition amongst the most vulnerable populations through supplementary feeding. Under the nutrition programme, 162,262 children aged 6-59 months including 35,522 moderate acute malnutrition (MAM) cases were assisted in 2018 through the prevention of acute malnutrition programme. WFP worked in partnership with other actors to strengthen the implementation of effective nutrition-sensitive interventions focusing on the first 1,000 days of a child's life. A minimum package of complementary activities composed of immunization, family planning, prenatal consultation, prevention and treatment of malaria, deworming, vitamin A supplementation and promotion of appropriate infant and young child feeding (IYCF) practices were implemented at all 582 project sites across all four target regions. WFP's MAM treatment was also provided abiding by national guidelines on community management of acute malnutrition. A total of 25,253 MAM cases recovered by the end of December 2018 with a recovery rate of 96.7 percent.

Undernutrition remains a public health concern in Cameroon with national stunting prevalence standing at 31.7 percent. Stunting affected all segments of the population, more pronounced in children living in the four most vulnerable regions of Cameroon. The SMART surveys conducted in 2016, 2017 and 2018 demonstrated improvement and stabilization in the GAM situation with 2018 GAM rates of 2.5 percent in the East, 4.1 percent in Adamawa, 5.9 percent in the

North and 9.7 percent in the Far North regions. According to the SMART survey in 2018, the stunting situation remained of great concern with rates at 35.4 percent in the East, 28.7 percent Adamawa, 30.6 percent in the North and 35.9 percent in the Far North regions. Approximately 161,600 and 62,200 children suffered from MAM and SAM respectively in the four target regions.

A reduction in the prevalence of GAM rates was observed all year around. Four rounds of door-to-door mid-upper arm circumference (MUAC) screenings were conducted in programme-target communities across all four regions with an average of 573,000 children screened per round. Results of these quarterly community MUAC screenings in targeted health districts reveal improvements in nutrition status from February to December 2018 with GAM rates standing at 2.56 percent in the Far North region, dropping from 6.77 percent to 3.7 percent in the North and from 3.32 percent to 2.33 percent in the East region. Community-based management of malnutrition was strengthened through the set-up of 342 IYCF support and actions groups. Training and material support were provided to 170 health staff, 890 community health workers and 1921 IYCF support and action group members in programme districts. Regular monitoring and supervision visits were conducted to activity sites to strengthen the capacities of service providers and improve on programme quality.

In collaboration with UNAIDs on the Joint United Nations Programme on HIV/AIDS, WFP implemented the nutritional assessment, counselling and support component which targeted malnourished people living with HIV (PLHIV) on ART from refugee and host populations across nine government HIV treatment and care units. Nutrition support was provided to 1,741 ART clients in the East and Adamawa regions. A total of 1,737 clients were discharged from the programme in 2018, amongst which 1,659 recovered from malnutrition. Average performance indicators recorded an annual nutritional recovery rate of 95.5 percent.

Nutrition assistance through the provision of specialized nutritious food (SNFs) was important to improve survival rates and support weight gain for ART clients. The SNFs assisted with side effects of ARV was successful for patients to respect all their appointments in HIV treatment and care units. As a result, the significant reduction of failures to follow up with ART clients in areas where nutrition support is being provided. Default rates reduced from 14 percent in 2016 (higher than recommended global standard) to 1.08 percent in 2017 and 0 percent in 2018.

WFP further organized and trained 21 community-based HIV associations aimed at improving their knowledge and skills on nutritional assessment of acute malnutrition amongst children 0-59 months, pregnant and lactating women (PLW). The income-generating programme launched in 2017 was scaled up to

reach 500 households of PLHIV with capacity strengthening activities, including business skills, provision of agricultural tools and small livestock for home animal-rearing. These households were organized into 22 groups, legalized with access to loans through a Village Savings Loan Association Scheme.

#### Strategic Outcome 04

Food-insecure smallholders, especially women, in priority districts of Far North, North, Adamaoua and Eastern regions have sustainably increased incomes to enhance their self-reliance and livelihoods and improve their productivity by 2020.

WFP partnered with the International Fund for Agricultural Development (IFAD) and the Food and Agriculture Organization (FAO) to provide technical assistance to small-scale farmers and cooperatives, prioritizing women's representation and leadership in post-harvest management and value-chain opportunities. Strategic outcome 4 aims at strengthening the capacities of smallholder farmers in the target regions to promote the production and use of nutritious crops and participation in markets to enhance their self-reliance and to improve productivity worldwide.

In partnership with local stakeholders, WFP worked to increase smallholders' engagement in local value chains and enable communities to increase their productivity. WFP also aimed to strengthen the capacity of women to trade their locally-produced goods and improve their access to markets. The Government joined hands with WFP and other United Nations agencies, FAO, IFAD as well as NGOs to strengthen smallholders' capacities through establishment of cooperatives, provision of management and leadership training as well as to equip them with skills on price negotiation.

In 2018, WFP began the ground work for the implementation of this activity. The diagnosis of producer cooperatives was delivered to identify the needs for capacity strengthening and discussions with cooperating partners were held on how to support small-holder farmers. An operational strategy and memorandum of understanding (MoU) were drafted and are awaiting approval. Therefore, technical assistance to local producers will be fully operational in 2019 as discussions continue with the Ministry of Agriculture (MINADER), NGOs and other actors including FAO and IFAD.

#### Strategic Outcome 05

The Government's work to achieve zero hunger is supported by effective partnerships by 2030.

Strategic outcome 5 focuses on improving national resilience building, WFP worked closely with the Government of Cameroon to promote national

partnerships aiming to boost the government's capacities on building social safety nets to achieve SDG 2 Zero Hunger. WFP provided a significant contribution to the finalisation of a national policy on social protection, including national safety nets strategy in close collaboration with World Bank and the International Labor Organization (ILO). Moreover, WFP actively participated to the evaluation of the pilot phase of social safety nets programmes in the Far North region (Soulede Roua village, Mayo-Tsanaga division) and North West region (Ndop Village, Mezam division) to advise on the extension of the pilot project. WFP also shared the experience on the vulnerability targeting and the unified social registration of the poor people.

Throughout 2018, WFP took a major role in supporting the Ministry of Agriculture (MINADER) in implementing a new approach in food security classification called "Cadre Harmonisé". A total of 192 relevant actors including United Nations agencies, government departments and cooperating partners were trained on this approach.

WFP and its partners collaborated to integrate agency-led systems for data management, gender-responsive monitoring and accountability into a national framework to inform programming and track progress towards SDG 2. A cost-of-hunger study was planned to inform future national policies and programmes and guide donors and investors' decision making.

To support programme planning and enhance early warning, preparedness and response planning, WFP supported the Government early warning system through Food Security and Monitoring System (FSMS). Monthly data collection of market food prices were organized at field office level. In 2018, two rounds of data collection for FSMS were conducted, results and analysis were shared with other actors in the food security sector. The exercise was equally extended to the North West and South West regions to capture food security indicators in these crises affected regions and inform programme design and implementation. In 2018, MINADER was involved in data collection as the Government will take ownership and institutionalize this initiative in the long-term. Nevertheless, the Government financial contribution to this exercise remains a challenge.

At field level in the Northern and Eastern regions, food security working groups (GTSA) coordinated by MINADER were fully functional with the goal to promote synergy and complementarity of activities. Nutrition interventions were carried out through the Joint Action Plan for the Fight Against Malnutrition in Cameroon. WFP worked in close collaboration with the Ministry of Public Health, United Nations Children's Fund (UNICEF), the United Nations High Commissioner for Refugees (UNHCR) and a wide network of local and international NGOs, including African Humanitarian Action (AHA), International Medical Corps (IMC) and *Association d' Assistance au Développement (ASAD)*. WFP continued to

have effective working relationships with administrative, political and technical government counterparts at central and local levels to foster government ownership of the interventions.

Joint initiatives with United Nations agencies and NGOs were created to provide a coherent response, using common platforms to assist vulnerable communities through complementary services. In 2018, a new partnership with the United Nations Population Fund (UNFPA) was established on the comparative advantages of each organization to complete each other and bring about a comprehensive benefit to populations in the most food insecure and conflict-affected areas in Cameroon, with a particular focus on women and adolescent girls who need integrated sexual and reproductive health services. WFP is leading the humanitarian supply chain sectoral group. For quality and cost-effectiveness in humanitarian assistance, WFP is running the Humanitarian Air Service (UNHAS).

#### **Strategic Outcome 06**

The humanitarian community in Cameroon has access to UNHAS services until alternative means of air transport are available.

In 2018, the United Nations Humanitarian Air service (UNHAS) played a significant role in support of the Humanitarian Response Plan in Cameroon and successfully enabled humanitarian organizations to have access to beneficiaries and project implementing sites uninterruptedly.

With a 37-seater Embraer 135LR Jet, shared with UNHAS Chad, UNHAS Cameroon conducted 678 scheduled and ad-hoc flights and flew 680 hours transporting both passengers and light cargo for the entire humanitarian community and their implementing partners to Garoua, Maroua, N'djamena, Ngaoundere and Yaoundé. A total of 8,454 passengers and 22 mt of light cargo were transported from 50 organizations registered in Cameroon.

To ensure the air services remained aligned to the needs of the passengers, a total of eleven users' group meetings, three Steering Committee meetings and two surveys (on passenger satisfaction and the on provision of access survey) were organized. The passengers' satisfaction survey revealed that 88 percent of respondents were satisfied with the service provided in 2018.

Introduced in June 2017 to reduce costs and achieve value for money, the aircraft cost-sharing concept between UNHAS Cameroon and Chad proved to be very cost-effective and resulted in a 30 percent reduction in the operational costs per passenger (in 2017 USD 425 to USD 298 in 2018).

The operation implements a partial cost-recovery mechanism by charging a nominal fee to augment donor contributions and to mitigate against abuse of a

free air service. Internal flights and international flights are charged at USD 100 and USD 200 respectively, accounting for approximately 20 percent of the entire annual budgetary requirement for 2018.

# Cross-cutting Results

## Progress towards gender equality

Improved gender equality and women's empowerment among WFP-assisted population

In Cameroon, men have the traditional role of making decisions for the purchase and use of food. Women in local host communities have always been active in the agriculture sector in addition to the traditional child bearing and rearing and household tasks. However, women face a variety of economic and social constraints such as lack of access to land and productive assets including equipment and credits.

Sensitizations were carried out during distributions to promote decision-making by both men and women over the use of rations. This led to an increase in the proportion of households where both men and women made decisions over the use of food assistance in all regions to close to 30 percent. The proportion of households where women alone made decisions of the use of assistance doubled to above 40 percent.

In a small proportion (less than 30 percent) of households men still made decisions. In general, more women received transfers of food assistance, through cash transfers and in-kind. WFP ensured that women were part of all food assistance and decision-making. About 55 percent of food assistance decision-making committees had women among its members, generally higher in the East and Adamaoua than in the North and Far North, while for food committees the proportion was generally higher than for cash committees.

In nutrition programmes, men were actively targeted during nutrition sensitization and communication so that they can contribute to maternal and child care and nutrition in the household.

About 15 trainings were organized for WFP staff on WFP gender policies, gender analysis, mainstreaming gender during the implementation of assistance programmes and social norms. Trainings were attended by approximately 75 staff with about two fifths of whom were female and three fifths male. About 10 trainings were organized for cooperating partners to sensitize them on WFP's gender policy and how to integrate gender into their activities. These trainings were attended by approximately 200 staff of cooperating partners with about 50 percent female and 50 percent male.

Women were supported to become retailers in the CBT programme, thus economically empowered. Within the framework of HIV/AIDS nutrition programme, women were also economically empowered through business start-up programmes, in which village loans and savings schemes enabled them to start new businesses. This put them in a better position to cater for their entire families, avoiding relapse into malnutrition. Women and pregnant and

lactating mothers as well as aged women involved in FFA activities were given special working hours and lighter chores within their capacity, which also allows them time to nurse their children or accomplish other household tasks.

## Protection

Affected populations are able to benefit from WFP programmes in a manner that ensures and promotes their safety, dignity and integrity

The most common protection challenges at CBT sites include blocked SIM cards and failed money transfers, which accounted for the dependency of beneficiaries on retailers or cooperating partners. Complaints on the quality of food sold to beneficiaries by retailers as compared to that in regular markets were also received. Late arrival of retailers leading to long waiting lines, beneficiaries forced to buy food commodities they did not chose, challenges related to targeting and inclusion and exclusion errors were also reported. Discussions with retailers, closer supervision by WFP as well as sensitizing beneficiaries on their rights have improved the situation.

However, some challenges were observed during distributions. These were related to the crowd control, long waiting hours and insufficient infrastructure, such as shaded areas, and potable water. WFP has been addressing these challenges together with cooperating partners through trainings and investing on necessary tools and infrastructures.

In school feeding, the lack of water in some schools made it challenging. Recommendations were made either to provide fortified biscuits or to work with WASH colleagues or local council to provide water in the school. The needs for utensils for cooking or the absence of some ingredients affected the quality of the cooking. Utensils were budgeted for in the school feeding programme and the beneficiary community contributed to providing ingredients as part of their participation. The hygienic conditions of dishes which children use to eat their meals remain to be improved.

About 17 sensitization sessions on WFP gender and protection policies were carried out for WFP staff (including members of the Gender and protection Results Network) and cooperating partners in all regions. About 75 WFP staff and 200 cooperating partners staff attended trainings. Topics included humanitarian principles, gender-based violence, protection against sexual exploitation and abuse (PSEA), accountability to affected populations. A 'Train the Trainers' workshop on protection was carried out in the East region.

As a result of the trainings, WFP has seen improvement of the quality of work from partners who factor in protection elements in their programming and respond to identified protection concerns in a timely manner. Regular meetings

were held with partners to discuss programmatic issues including a review of protection trends and mitigation measures.

WFP partnered with other agencies such as the United Nations High Commissioner for Refugees (UNHCR) and international non-governmental organizations in the dissemination of protection and gender related messages during general distributions. For example, information and broadcast key messages on protection, gender, nutrition and hygiene were developed and disseminated during sensitization sessions. WFP staff closely supervised activities and provided technical support to cooperating partners. A hotline as well as complaints desks were set up to manage and respond to complaints.

### Accountability to affected populations

Affected populations are able to hold WFP and partners accountable for meeting their hunger needs in a manner that reflects their views and preferences

The cross-cutting aspects were central for the Cameroon country strategic plan (CSP). In accordance with WFP Strategic Plan (2017–2021) and WFP's Strategy for Accountability to Affected Populations (AAP), protection and conflict-sensitiveness were integrated throughout the CSP. WFP enforced systematic measures to assure WFP's zero tolerance policy towards sexual exploitation and abuse.

For its own staff and partners, WFP implemented an intensive capacity strengthening plan on protection and AAP. As part of this plan, a consultation workshop, with the active and inclusive participation of WFP staff from the Country Office and field Offices, was held in Yaounde in August 2018. The workshop was conducted by gender and protection and AAP regional advisors and aimed to build stakeholders capacities on gender mainstreaming, and protection/AAP integration in WFP operations.

WFP ensured that beneficiaries were regularly consulted before taking decisions that affected them in the participatory community planning workshops.

As an evidence of AAP's improvement, the beneficiary satisfaction regarding communication and sensitization, distribution process and transparency, as well as inclusiveness remained over 95 percent from January to November 2018.

WFP contributed to AAP by continuing to use complaint and feedback mechanisms (CFMs) that included a toll-free hotline, complaints management committees and face-to-face meetings with community groups. Beneficiaries were informed of all mechanisms including how and where to complain or give feedback. WFP's toll-free hotline continued to be very valuable through collecting information on households and to strengthen the response on the basis of

emerging needs from the ground, as well as a communication channel to ensure that programmatic changes were regularly communicated to beneficiaries in advance.

Moreover, questions on protection and AAP were also included in the post-distribution monitoring (PDM) surveys that ensured systematic follow-up of concerns, and beneficiary perceptions regarding targeting, choice of transfer modality (food, cash, and/or voucher) and the distributions process.

### Environment

Targeted communities benefit from WFP programmes in a manner that does not harm the environment

Cameroon is known as "Africa in miniature" because it exhibits all the major climates and vegetation of the continent, including mountains, desert, rainforest, savanna grassland and ocean coastland. Cameroon can be divided into five geographic zones. These are distinguished by dominant physical, climatic and vegetative features. Deforestation and air pollution are increasingly becoming major issues affecting the environment.

In Cameroon, the lack of an effective forest conservation programme and hunting of preserved species is a big challenge. Deforestation began to have a significant environmental impact in parts of the country. In the north, deforestation was the cause for increasing soil erosion, desertification, and reduced quality of pastureland. Overhunting and overfishing was a problem elsewhere in Cameroon. In the East, destruction of the forest created constraints and difficulties for the country's indigenous forest dwellers, the pygmies.

The influx of several refugees placed additional pressure on the local communities in the East and Far North regions, exploiting local resources to accommodate the newcomers.

Within the school feeding programme, wood was the main source of fuel for cooking. In a desert environment where trees were scarce, an alternate source of fuel was used. No impact assessment was completed to assess the impact of WFP's activities on the environment. However, this is planned for 2019.

# FFA irrigates village

Like many other communities in the Far North region of Cameroon, Mokola, a small village of 8000 people, was plagued by erratic rainfalls and droughts worsened by climate change. Agricultural yields were usually poor, despite more than 80 percent of the population cultivating land. For years, the people of Mokola lived with almost no access to water, experiencing therefore sparse downpours even during the raining season. Women and children usually walked hours in search of water.

In 2018, through its food assistance for asset initiative (FFA), WFP began work to bring water to the people of Mokola to improve the daily use of over 2500 beneficiaries in the village and thus increase agricultural production. During FFA projects, participants also receive food based-transfers to address their immediate food needs, while they build assets that will improve their livelihoods.

WFP, in collaboration with a local non-governmental organization, *Centre d'Appui à l'Auto Promotion pour le Développement Durable (CAPROD)*, worked with the over 500 participants from the community to build two 25 m long forebays across the bed of river Mayo which usually dries up after the heavy rains. The construction of this asset has made it easier to retain storm/rain water runoffs and created a water retention system for the irrigation of nearby farmlands and gardens (as the retained water easily infiltrates the soil), cattle rearing and for other household necessities.

During the construction of the forebays, the participants also received food like rice, beans, vegetable oil, and salt.

"This project has saved our lives" says Badai Albert, the chief of Mokola, "At this same period last year, the riverbed was completely dry, and yields were poor. I remember how long the women and children had to walk to get water even for household chores and now, they no longer walk these long distances. It has completely transformed our community".

Bava Thomas is the head of the management committee that oversees the everyday utility of the water retention site. He also has a garden along the river bank. "Cultivating on my garden and farms this year have never been so easy. I have water even after the rains and the crops are in good condition, I am looking forward to a plentiful harvest." Thomas states.

Fadimatou and her husband cultivate sorghum and participated in the FFA project. "The food was well received by the community. We did not have to worry about what to eat during that time. I had never used vegetable oil before, thankfully we received some cooking lessons on how to use it and my kids love it", Fadimatou says with a smile on her face.

Since the construction of the forebays, 47 families have returned to the village and agro-pastoral conflicts that existed between farmers and herders have greatly reduced. Inhabitants in the Mokola community say life has become much easier. Their livelihood is assured with the availability of water.

# Output Indicators

Detailed Indicator	Unit	Target Value	Actual Value	% Achieved
<b>Strategic Result 1: Everyone has access to food</b>				
Strategic Outcome 01: Populations affected by disasters including refugees, IDPs, returnees and host populations in Cameroon have safe access to adequate and nutritious food during and after crises.				
Output A: Women, men, girls, boys, communities at risk and refugees and IDPs in crisis-affected areas receive food assistance to meet their basic food and nutrition requirements.				
Act 01. Provide unconditional food assistance with accompanying social and behavioural change communication for vulnerable households affected by disaster.				
Number of refugee/IDP sites assisted	site	650.0	628.0	96.6
Number of rations provided	ration	35000000.0	31044000.0	88.7
Number of retailers participating in cash-based transfer programmes	retailer	130.0	143.0	110.0
Value of non-food items distributed	US\$	850000.0	822052.0	96.7
Output E: Women, men, girls, boys, communities at risk and refugees and IDPs in crisis-affected areas receive food assistance to meet their basic food and nutrition requirements.				
Act 01. Provide unconditional food assistance with accompanying social and behavioural change communication for vulnerable households affected by disaster.				
Number of men exposed to WFP-supported nutrition messaging	individual	30000.0	35660.0	118.9
Number of women exposed to WFP-supported nutrition messaging	individual	40000.0	43336.0	108.3
<b>Strategic Result 1: Everyone has access to food</b>				
Strategic Outcome 02: Vulnerable households in protracted displacement and communities at risk in chronically food-insecure areas have safe year-round access to adequate and nutritious food, and increase their resilience to shocks.				
Output A: Food-insecure women, men, boys and girls in communities at risk receive food assistance to meet their basic food and nutrition requirements.				
Act 02. Provide school feeding and a home-grown school feeding pilot for primary school children in target regions.				
Number of primary schools assisted by WFP	school	145.0	134.0	92.4
Output D: Food-insecure women and men in target areas participate in asset creation and productive safety net programmes to meet short-term food gaps during lean seasons and, in the long term, to improve their productivity and food security, to adapt to environmental changes and support the regeneration of ecosystems.				
Act 04. Provide food assistance to support early recovery and community resilience, environmental protection and adaptation in target communities.				
Kilometres (km) of footpaths, tracks or trails rehabilitated	Km	10.0	8.5	85.0
Kilometres (km) of irrigation canals rehabilitated	Km	2000.0	1700.0	85.0
Linear meters (m) of soil/stones bunds or small dikes rehabilitated	meter	2.0	1.75	87.5

Detailed Indicator	Unit	Target Value	Actual Value	% Achieved
Number of assets built, restored or maintained by targeted communities	Number	13.0	13.0	100.0
Number of community water ponds for domestic use constructed (3000-8000 cbmt)	Number	10.0	9.0	90.0
Number of fish ponds constructed	Number	15.0	13.0	86.7
Number of hives distributed	Number	150.0	120.0	80.0
Number of wells or shallow wells rehabilitated for domestic use	Number	30.0	27.0	90.0
<b>Strategic Result 2: No one suffers from malnutrition</b>				
Strategic Outcome 03: Children aged 6–59 months and vulnerable women and men in food-insecure prioritized districts have reduced malnutrition rates in line with national standards by 2020.				
Output A: Targeted girls and boys aged 6–59 months and malnourished women and men on ART receive a comprehensive package for the prevention of malnutrition.				
Act 06. Implement malnutrition prevention activities including BSF for children aged 6–23 months, treatment of MAM for children aged 24–59 months, support to caretakers of children under SAM treatment and food by prescription for malnourished ART patients and strengthening capacity at community and health district level, for joint nutrition action planning and implementation.				
Number of health centres/sites assisted	health center	450.0	513.0	114.0
Number of individuals (female) trained in child health and nutrition	individual	250.0	247.0	98.8
Output C: Vulnerable populations using district health facilities benefit from the enhanced capacity of districts to deliver on the joint action plan for the prevention of malnutrition.				
Act 08. Enhance capacities in health districts to implement the joint action plan and support SUN.				
Number of training sessions for beneficiaries carried out (health and nutrition)	training session	50.0	53.0	106.0
Output E: Vulnerable populations using district health facilities benefit from the enhanced capacity of districts to deliver on the joint action plan for the prevention of malnutrition.				
Act 08. Enhance capacities in health districts to implement the joint action plan and support SUN.				
Number of community health volunteers (female) supported	individual	250.0	253.0	101.2
Number of community health volunteers (male) supported	individual	500.0	494.0	98.8
Number of men receiving WFP-supported nutrition counselling	individual	30000.0	28483.0	94.9
Number of women receiving WFP-supported nutrition counselling	individual	40000.0	42433.0	106.1
Output H: Children aged 6–59 months, pregnant and lactating women and girls and malnourished people living with HIV on ART in target areas receive specialized nutritious foods and accompanying social and behavioural change communications to improve their nutrition status.				

Detailed Indicator	Unit	Target Value	Actual Value	% Achieved
Act 07. Train community health workers in malnutrition prevention through multi-sectoral coordination systems and partnerships, and enhance capacities in health districts to implement the joint action plan and support SUN.				
Number of UN agency and NGO staff trained	individual	500.0	495.0	99.0
Number of humanitarian workers provided health services	individual	500.0	435.0	87.0
Output H: Targeted girls and boys aged 6–59 months and malnourished women and men on ART receive a comprehensive package for the prevention of malnutrition.				
Act 06. Implement malnutrition prevention activities including BSF for children aged 6–23 months, treatment of MAM for children aged 24–59 months, support to caretakers of children under SAM treatment and food by prescription for malnourished ART patients and strengthening capacity at community and health district level, for joint nutrition action planning and implementation.				
Number of UN agencies/international organizations that collaborate in the provision of complementary inputs and services	agency/organization	40.0	53.0	132.5
Strategic Result 3: Smallholders have improved food security and nutrition				
Strategic Outcome 04: Food-insecure smallholders, especially women, in priority districts of Far North, North, Adamaoua and Eastern regions have sustainably increased incomes to enhance their self-reliance and livelihoods and improve their productivity by 2020.				
Output F: Women and men smallholders living in environments at risk have access to improved agricultural assets and practices to enhance their productivity and resilience and increase value chain opportunities.				
Act 09. Provide technical assistance for small-scale farmers and cooperatives – prioritizing women’s representation and leadership – in post-harvest management and value-chain opportunities, in collaboration with IFAD and FAO.				
Number of smallholder farmers supported by WFP	individual	5000.0	-	0.0
Quantity of complementary foods purchased from local suppliers	Mt	1000.0	-	0.0
Strategic Result 5: Countries have strengthened capacity to implement the SDGs				
Strategic Outcome 05: The Government’s work to achieve zero hunger is supported by effective partnerships by 2030.				
Output C: Food-insecure populations in target areas benefit from improved national systems for data handling, monitoring and accountability to track progress towards SDG 2.				
Act 11. Provide technical expertise to partners and stakeholders in support of a national nutrition-sensitive, shock-responsive and gender-responsive safety net system, and provide common management of information technology, warehouses and delivery corridors.				
Number of food security monitoring systems in place	system	1.0	1.0	100.0
Number of government counterparts trained in use of data collection tablets	individual	200.0	221.0	110.5
Number of training sessions for beneficiaries carried out (health and nutrition)	training session	50.0	43.0	86.0

Detailed Indicator	Unit	Target Value	Actual Value	% Achieved
Output H: Food-insecure populations in target areas benefit from improved supply chain management and common services provided by operational partnerships.				
Act 11. Provide technical expertise to partners and stakeholders in support of a national nutrition-sensitive, shock-responsive and gender-responsive safety net system, and provide common management of information technology, warehouses and delivery corridors.				
Number of agencies using common cash-based transfer platforms	agency/organization	5.0	4.0	80.0
Number of agencies and organizations using humanitarian air services	agency/organization	30.0	39.0	130.0
Number of WFP-led clusters operational	unit	7.0	4.0	57.1
Output M: Food-insecure people in target areas benefit from the expansion of social safety nets in a national system for the elimination of hunger.				
Act 10. Provide technical expertise to Government and partners to plan and coordinate work for zero hunger, including early warning, preparedness and food security and nutrition response, national nutrition-sensitive, shock-responsive and gender-responsive safety net systems, and provide common management of information technology, warehouses and delivery corridors.				
Number of national coordination mechanisms supported	unit	7.0	8.0	114.3
Strategic Result 8: Sharing of knowledge, expertise and technology strengthen global partnership support to country efforts to achieve the SDGs				
Strategic Outcome 06: The humanitarian community in Cameroon has access to UNHAS services until alternative means of air transport are available.				
Output H: The humanitarian community has access to safe and cost-effective humanitarian air services to reach beneficiaries and implementation sites unhindered.				
Act 12. Provide safe and reliable air services for the humanitarian community until alternatives are available.				
Number of passengers transported	individual	8100.0	8454.0	104.4
Output H: The humanitarian community has adequate air transport capacity to move staff and cargo for urgent humanitarian responses and medical and security evacuations.				
Act 12. Provide safe and reliable air services for the humanitarian community until alternatives are available.				
Quantity (mt) of cargo transported	Mt	24.0	22.0	91.7
