WFP Lebanon Market Bulletin
Q1-2019 — June Update

Highlights

• Although the formation of the cabinet has been concluded at the beginning of the year, fiscal and monetary pressures persisted in the first quarter of 2019, putting the country at high economic and monetary risks.

• The general inflation rate has recorded a level of 1.2% during the first quarter of 2019, compared to 1.1% during the same period of 2018. The highest inflation rate was observed in the North governorate at 1.9%, while the lowest was recorded in Bekaa at 0.5%.

• In Q1-2019, food prices increased by 2.3% on a national level, mainly in the North (3.3%) and in Nabatieh (3.1%). Inflation in cost of utilities and fuel recorded a level of 1.1%, while rents have increased by 0.8%, the highest increase in rents was observed in Bekaa (2.4%).

• Construction permits issuing went down by 28% in the first quarter of 2019, compared to the Q1-2018, decreasing income opportunities for Lebanese labour and Syrian refugees.

• In April 2019 the Higher Defence Council has given a deadline (10th of June 2019) to Syrian refugees living in hard structures (housing units comprising concrete) to settle their situation. This will incur these families (estimated at 15,000 individuals) additional expenses.

Interest rates on deposits
- 8.8% on LBP (Dec 2018:8.3%)
- 5.7% on US$ (Dec 2018:5.2%)

Budget deficit
- 7.5% of GDP (2018:11%)

Food basket price
-3% (Q1-2019/Q1-2018)

Energy price index
+1.1% (Q1-2019/Q4-2018)

Construction index
-28% (Q1-2019/Q1-2018)

Key Indicators

Current economic situation

While the formation of the new cabinet has given a push of confidence to the Lebanese economy in the first quarter of the year, and accelerated the process of the CEDRE conference credit line of US$11 billion, the country is witnessing a heavy political debate over the national budget, and how to obtain additional income and squeeze expenses.

Lately, Moody’s has downgraded Lebanon’s credit from a previous B3 in December to a Caa1, reflecting a more pessimistic view of the economy and country’s long term investments.

Interest rates continue to rise on both LBP and USD deposits, reflecting slowness in the economy, coupled with higher demand on USD in the foreign exchange markets.

On a positive note, the long-delayed budget plan will decrease the deficit to 7.5% of GDP, compared to 11% in 2018 budget.

Internationally, Lebanon was ranked 106th among 115 countries, and last among 12 Arab League countries, on its Energy Transition Index for 2019. It also ranked Lebanon in 30th place among 32 upper middle-income countries (UMICs) in the survey. Lebanon’s global rank declined by three places since 2018.

Internationally, Lebanon was ranked 106th among 115 countries, and last among 12 Arab League countries, on its Energy Transition Index for 2019. It also ranked Lebanon in 30th place among 32 upper middle-income countries (UMICs) in the survey. Lebanon’s global rank declined by three places since 2018.
Inflation in Q1-2019

As per the government’s Central Administration of Statistics (CAS), the general inflation rate has recorded a level of 1.2% during the first quarter of 2019, compared to 1.1% during the first quarter of 2018. Food prices increased by 2.3% on a country level, and by 3.3% in the North in the first quarter, and prices of fuel and utilities increased by 1.1%.

Last year, the inflation in the prices of food was very alarming in Lebanon, as the CAS figures have recorded an increase of 6.3%, the highest in six years. Figure 1 shows the share of food inflation to the general inflation rates across the Lebanese governorates. It is clear that the inflation food component is the highest in all regions.

Rents have increased by 0.8%, compared to 1% during the first quarter of the last year. Breaking it down by governorate, the highest inflation was recorded in the North/Akkar with an inflation rate of 1.9%, followed by Beirut (1.7%), then Nabatieh (1.4%). The lowest inflation rate was observed in Bekaa/Baalbek-Hermel with 0.5%.

Food prices as per the WFP VAM database, based on retail prices in WFP-contracted shops across Lebanon, have been stable. Prices have reflected a slight drop in basic food products in the first quarter of 2019, compared to the same quarter of last year. The price of vegetable oil has decreased by 12% year-over-year, and prices of sugar have decreased by 9%. The price of pasta has decreased by 4.4%. To note that the variance between the government’s inflation figures and WFP database prices change could be attributed to: i) the control and follow-up by WFP on selling prices in contracted shops, and ii) the fact that most products sold in WFP-contracted shops are basic food, while the CAS numbers reflect the prices of all categories of food and non-alcoholic drinks.

Real Estate and construction

The real estate sector remained under stress in the first quarter of 2019, following a tough year. In Q1-2019 real estate transactions decreased by 15% from Q1-2018, while construction permits decreased by 28% in the first quarter, compared to the first quarter of the last year. The recession in the construction market is affecting employment for Lebanese poor populations as well as for vulnerable Syrian refugees. Construction permits issuing has dropped from a total of 2.2 million sq. meters in Q1-2018 to a total of 1.6 million sq. meters in the first quarter of 2019. This represents a decrease of 28% year-on-year.

The major decrease in construction activities was observed in the North, with 49% drop from Q1-2018, followed by Nabatieh (42%), and Bekaa (41%). The only governorate that witnessed an increase in construction activities was Beirut, with 26% increase. On average, agriculture and construction were reported to be the top two sectors employing half of the Syrian refugees’ labour force, with construction alone employing 32% of Syrian refugees’ male labour.

Agriculture

Exports of agricultural products have increased by 11.4% in the first two months of 2019, compared to an increase of 6.1% during the same period of last year. Agricultural products imports have decreased by 0.3% in the first two months of 2019. This reflects a remarkable growth in Lebanese exports, especially after the long-awaited opening of The Nassib border between Syria and Jordan in late 2018, which helped Lebanon increase exports to Jordan and the Gulf Cooperation Council countries (GCC).

The agriculture sector has employed 24% of the working force amongst the Syrian refugees in Lebanon in 2018. Agriculture is the third biggest sector in Lebanon after services/trade and industry. In 2017, agriculture has employed 11% of the labor force and contributed to 5% of the country’s gross domestic product (GDP). As per the FAO, 64% of Lebanese surface is considered agricultural, and 14% of total land is considered arable.

Vegetables make the biggest product group in the sector, making up to 63% of the sector, of which one fourth is potato, followed by fruits accounting 31% of the total production. Main fruits grown are apples, citrus, grapes, and bananas. Other produces are tobacco and cereals. The North governorate comprises 31% of the total agricultural holdings in Lebanon, followed by Bekaa (20%), and Mount-Lebanon (19%).

Methodology: WFP collects food prices through its retail traders network. The network consists of 460 retail traders across Lebanon. Price information is collected monthly via a point of sales system tracking price changes of basic food commodities. Figure 2 shows the price changes of basic food commodities on a national level between Q1-2019 and Q1-2018, calculated on a SMEB basis (Survival Minimum Expenditure Basket, US$87 per person, per month). The basic food basket, which includes rice, sugar, pasta, beans, bulgur, canned meat, vegetable oil and salt, has recorded a decrease in price of two percent in the first quarter of 2019, compared to the same period of 2018.

Methodology: WFP collects food prices through its retail traders network. The network consists of 460 retail traders across Lebanon. Price information is collected monthly via a point of sales system tracking price changes of basic food commodities. Figure 2 shows the price changes of basic food commodities on a national level between Q1-2019 and Q1-2018, calculated on a SMEB basis (Survival Minimum Expenditure Basket, US$87 per person, per month). The basic food basket, which includes rice, sugar, pasta, beans, bulgur, canned meat, vegetable oil and salt, has recorded a decrease in price of two percent in the first quarter of 2019, compared to the same period of 2018.

Construction permits’ issuing decreased by 28% in Q1-2019 year-on-year basis
Exports of agricultural products have increased by 11.4% in the first two months of 2019.

The Cost of housing rent
On average, and as per the Central Administration of Statistics (CAS), rents in Lebanon have increased by 0.8% in the first three months since the beginning of the year. This ranged between 2.4% in Bekaa/Baalbeck-Hermel, and a minus 0.5% in South (figure 4). This is very similar to last year first quarter’s inflation, when rents increased by 1% in the Q1-201815.

While no clear dynamics driving the cost of rent upwards or downwards, it is usually driven by demand, supply, construction activity, and affordability. The continuous halt of governmental residential loans is still pushing rents upwards.

Fuel prices
Following the decline in fuel prices by the end of 2018, prices have picked up in the first quarter of 2019 in line with rising world’s oil prices. The cost of diesel oil recorded LBP18,400 for the 20 liters. This represents a 9% increase in three months.

Diesel oil is widely used for heating from November to March amongst Syrian refugees and Lebanese especially in the mountains.

The cost of cooking gas has also increased in the first three months of 2019, and recorded a 14.3% hike compared to the end of December 201816. Figure 5 shows the evolution in the prices of the three basic fuel categories impacting the daily lives of poor Lebanese population, as well as Syrian refugees.

Figure 5: The cost of heating diesel oil increased by 9% in three months compared to the beginning of the year

The cost of cooking gas has also increased in the first three months of 2019, and recorded a 14.3% hike compared to the end of December 201816. Figure 5 shows the evolution in the prices of the three basic fuel categories impacting the daily lives of poor Lebanese population, as well as Syrian refugees.

Figure 5: The evolution of fuel prices through the last year (IPT)
The potential impact of additional taxation on vulnerable population

In an attempt to increase public revenues by US$1.9 billion in order to ease the public deficit in the new planned budget, the government will most likely impose new taxations that, as per experts, will impact the consumer mostly regardless of the income status. Most of the planned taxation will be on services and products, imported goods and administrative transactions and services. Another 3% taxation will target the pension salaries of ex-public servants. On a different note, the Retail Index published by Fransabank, recoded a 5% decrease in activity in Q1-2019 compared to Q1-2018, and 8% decrease from Q1-2017 (Figure 6).

Figure 6: The Fransabank and Beirut Commerce Association Consumer Index

The economic outlook

The economic outlook on the short and medium terms is still uncertain and considered very risky by many sources. The public debt is still eathing up to more then one third of the government’s revenues, with no clear plan of debt restructuring.

On a positive note, the government has approved the electricity reform plan in April 2019. The plan aims to boost generation capacity while reducing state subsidies that have led to one of the world’s heaviest public debt burden. The plan, which is divided into many phases, includes increasing generation capacity, reducing losses in transmission and eventually raising consumer electricity tariff. This will help in restoring trust, coupled with some attempts of reforms in fighting corruption and making public process, bidding, and recruitment more transparent.
