WFP Malawi Country Brief
September 2020

Operational Context

Malawi is a small landlocked country in Sub-Saharan Africa with a population expanding rapidly at 3 percent per year. With the majority of livelihoods dependent on agriculture, the population is highly vulnerable to the effects of natural disasters, in particular prolonged dry spells and flash floods.

Malawi’s challenges are compounded by a volatile economy, high rates of HIV/AIDS infection (at 9.6 percent), a low primary school completion rate (at 51 percent), and a high level of stunting (at 37 percent for children under five). Given these challenges, WFP’s operations support the Government in attaining a food- and nutrition-secure and resilient future, which is guided by the Sustainable Development Goals (SDG) with a particular emphasis on achieving zero hunger (SDG 2)

WFP has been present in Malawi since 1965.

In Numbers

5,783 confirmed cases of COVID-19 in Malawi (as 05 October 2020)
USD 59.4 million six-month (October 2020–March 2021) net funding requirements

41,000 refugees assisted with food and cash distributions

51% 49%

Strategic Outcome 1

- Refugees: To limit exposure for beneficiaries and staff, WFP has moved to bi-monthly food distributions to the 41,000 beneficiaries in Dzaleka Camp. Food items (beans and vegetable oil) were distributed while cash-based transfers for the cereal component of the food basket were done through bank transfers via MyBucks, a financial service provider in the camp, which can be accessed/withdrawn at each participant’s own convenience.
- Lean Season Response: The Malawi Vulnerability Assessment Committee (MVAC) report for the 2020/2021 lean season was officially endorsed by the Government in September and is now available for dissemination. A total of 2.6 million people are projected to be in need of food assistance as early as November 2020. All the analysed cities (Lilongwe, Blantyre, Mzuzu and Zomba), along with the three rural districts of Nsanje, Neno and Balaka, will likely be in Crisis (IPC Phase 3), while the remaining areas are likely to be in Stressed (IPC Phase 2).

Strategic Outcome 2

- School Feeding: Schools have been closed since March 2020 due to COVID-19. As such, 600,000 learners have been missing out on daily school meals provided by WFP. In response, in May 2020, WFP started providing take-home rations to some 550,000 learners in seven districts. As of 07 September, schools started to reopen gradually, with students in their final years resuming classes to sit for their exams before all classes can resume on 12 October. WFP will continue to provide take-home rations for school meals for the remainder of 2020 to prevent the spread of COVID-19 within schools, following the advice by the Ministry of Education to partners implementing school feeding programmes.
- Social Protection: WFP is continuing its technical support to the Government to strengthen the social protection system in responding to shocks – both COVID-19 and the lean season.

Strategic Outcome 3

- Malnutrition Prevention and Treatment: WFP continued to support the implementation of nutrition activities using various media channels such as radio programmes and jingles, social and behaviour change communication (SBCC) talking walls, drama sessions, mobile vans, and public address systems. Messages on maternal and infant and young child nutrition in the context of COVID-19 in seven districts reached an estimated 2.7 million people. COVID-19 and food safety awareness raising was also extended to markets through the SUN Business Network (SBN). WFP supported orientations on COVID-19 prevention and food safety to market focal points, while SBN provided personal protective equipment (PPEs) and hygiene materials to selected health facilities and markets in six districts.
Strategic Outcome 4
- Livelihoods: Food-Assistance-for-Assets (FFA) initiatives were rolled out with a focus on land resources activities (compost making, deep trenches, swales for water conservation).
- Participatory Integrated Climate Services for Agriculture (PICS) Training of Trainers took place in eight targeted districts in preparation for the scale-up in October 2020.
- Over 19,000 beneficiaries in six districts were reached via radio messaging on COVID-19 prevention, and climate and agriculture advice facilitated by WFP in collaboration with Farm Radio Trust.

Strategic Outcome 5
- Since mid-April, WFP has been collecting availability and price information for both food and non-food commodities from traders and households across the country to better understand how COVID-19 and its associated mitigating measures are impacting market access and food security, as well as to help inform response modality discussions. These analysis bulletins have been disseminated to stakeholders through the bi-weekly Minimum Expenditure Basket bulletin and the monthly COVID-19 Household Food Security Monitoring bulletin.

Strategic Outcome 6
- Following the announcement by the Government on lifting the suspension of commercial air travel in September, WFP Aviation coordinated its last humanitarian passenger flight after facilitating weekly flights in and out of Malawi since June 2020.
- In support of the Government's COVID-19 preventive measures, WFP erected mobile storage units at the Kamuzu International Airport in Lilongwe for health screening of passengers.
- WFP has facilitated the reception and transportation of approximately 130m³ of various humanitarian cargo on behalf of the Malawi Government from Direct Relief, Last Mile Delivery, Malawian Red Cross and the Government of Egypt.
- To boost information sharing and operational planning, a dedicated logistics website has been set up for the National Logistics Cluster. Currently, over 45 Information Management products have been published and disseminated by WFP.

Implementation of livelihoods activities in Malawi is underway while ensuring that adherence to COVID-19 prevention measures is enforced for all participants. Photo: WFP/ Badre Bahaji
