| Indirect support costs (6.5 percent) | 47 057 653 | 40 493 767 | 87 551 421 | |

Gender and age marker code:* 4

Rationale

- 1. Nigeria country strategic plan (CSP) originally envisioned an improvement in the security situation, a decrease in conflict-driven displacement, and a scaled government-led humanitarian response and early recovery efforts in the northeast. Budget revision 1 maintained the same logic but cautiously and conservatively increased crisis response cases, responding to the worsening conflict and food security situation, with a plan to reassess in 2020.
- 2. In October 2020, the cadre harmonisé¹ results indicated that 3.4 million people in northeast Nigeria would be food and nutrition insecure (Integrated Food Security Phase Classification/cadre harmonisé phases 3–4) during the post-harvest period of October to December 2020, which marks an increase of 27 percent compared to the same period in 2019. These numbers are projected to increase to 4.7 million people during the lean season from June to August 2021, an increase of 19 percent over the levels previously projected for the same period in 2020. The rise in food and nutrition insecurity was driven by the continued intensification of conflict in northeast Nigeria and the impact of COVID-19.
- 3. In October 2020, the Nutrition and Food Security Surveillance report showed that Yobe State has the highest prevalence of global acute malnutrition at 12.3 percent, with central and northern Yobe reaching the emergency threshold. Borno State follows closely at 10 percent. The prevalence of acute malnutrition is five times higher in adolescent girls (15-19 years) than older women (30.1 percent vs. 6.2 percent). The overall burden of global acute malnutrition in the northeastern states, Borno, Adamawa and Yobe, is projected at 883,870 children age 6–59 months. In the northwest, a rapid nutrition assessment conducted in 2019 among displaced children age 6–59 months showed a proxy global acute malnutrition rate of 18.4 percent in Sokoto, and in Zamfara proxy global acute malnutrition (mid-upper arm circumference) had

¹ The published data by the cadre harmonisé for Borno State were slightly overestimated at 5.1 million. Therefore, the Nigeria country office's research, assessment and monitoring team is using corrected data that reports the figures at 4.7 million.

^{*} http://gender.manuals.wfp.org/en/gender-toolkit/gender-in-programming/gender-and-age-marker/.

reached an alarming 31.1 percent. More recent rapid assessments conducted by local actors in these two locations are showing a dire situation that requires immediate assistance.²

Changes

Strategic orientation

4. Budget revision 2 reflects operational changes, including an increase in strategic outcome 1 beneficiaries, an increase in operational costs owing to increased caseload and rise of local prices due to inflation related to COVID-19, and the addition of a service provision activity.

Strategic outcomes

- 5. Under strategic outcome 1 activity 1, the Nigeria country office plans to assist 1.7 million beneficiaries³ in 2021 and decrease those assisted by 18 percent in 2022 to 1.4 million. While most of these beneficiaries will continue to be in the northeast, the contingency component (200,000) will include provisions for expansion beyond the northeast (e.g. internally displaced persons (IDPs) in the northwest, refugees in the south, and/or urban hotspots affected by COVID-19).
- 6. Under strategic outcome 2 activity 3, the improvement in the overall security situation and opportunities for recovery remain limited; therefore, the caseload will not increase. However, provisions are made in budget revision 2 for increased associated costs. In budget revision 1, initial scale-up-associated cost estimates were conservative and uninformed by volatile markets, driven by drops in global oil prices.
- 7. Under strategic outcome 3 activity 4, support to improving the nutritional status of children and pregnant and lactating women and girls (PLWG) will increase by 15,000 from June 2020 to September 2021. This will bring the total beneficiary caseload to 80,000 throughout the remainder of the CSP. This will assure a 1:1 ratio between mother and child.
- 8. Budget revision 2 increases the country office's investment in capacity strengthening and policy coherence by 81 percent and 90 percent under strategic outcomes 4 (activity 5) and 5 (activity 6). Provisions are made in this budget revision for strategic areas of engagement.⁴
- 9. Under strategic outcome6, a new activity 10, "on-demand service provision", will be added to enable WFP to provide contracted delivery solutions to organizations at full cost recovery. Current activities 7, 8, and 9 will continue providing humanitarian support as the crisis in northeast Nigeria escalates. As such, budget revision 2 makes a provision for increased operational costs for these activities.
- 10. An anticipated launch of a protection strategy in 2021 will cultivate strategic partnerships to improve consultation and information provision to affected populations. Reduced field presence and increased COVID-19-related movement restrictions require WFP to review how it engages, consults, and provides affected populations with information to better understand and address the potential barriers they face accessing assistance. As such, WFP has revisited its monitoring strategy to include two new third-party monitoring organizations, providing 67 staff spread across the deep field locations in which WFP operates. This is augmented by new hotlines for the complaints and feedback mechanism that covers all WFP's operational pillars. A new project

⁴ Shock-responsive social protection; re-design of the national home-grown school feeding programme; technical support on refugee issues; and a series of initiatives, including food bank networks, emerging from the zero hunger round table discussions.

2

² WFP will conduct a comprehensive food security and nutrition assessment in three northwestern states in 2021, aligned with the March cadre harmonisé analysis.

³ Representing 36 percent of 4.7 million people deemed to be food insecure (Integrated Food Security Phase Classification/cadre harmonisé phases 3 and 4) based on the October 2020 cadre harmonisé analysis.

- including several dedicated staff has been set up to build real-time data feeds and geospatial analysis to inform key implementing decisions.
- 11. The proposed supply chain matrix is informed by an increase in beneficiary numbers and COVID-19-induced inflation in food market value chain. This also has a direct impact on field-level agreement costs with distributions requiring additional security measures, longer distribution times and extra hygiene material.
- 12. Budget revision 2 makes provisions for increased security-related costs. The expanded operating context and the deteriorating security situation in the northeast and elsewhere require additional assets to comply with the minimum operating security standards across new areas of interest and expansion and additional training of the security unit workforce.

Beneficiary analysis*

^{*} Budget revision 2 = 2,243,187 unique beneficiaries. Fifty-eight percent and 94 percent unconditional resource transfers to support access to food overlap rate was applied between nutrition prevention activities and moderate acute malnutrition (MAM) prevention activities. No changes to strategic outcomes 2 and 3. *Abbreviations*: CBT = cash-based transfers.

Transfers

13. The choice of transfer modalities is informed by contextual assessments and speaks to the diverse nutritional needs of the beneficiaries.
