

SAVING LIVES CHANGING LIVES

WFP Palestine Monthly Market Dashboard

April 2022

Highlights

The monthly market dashboard presents price trends for staple commodities and cash crops most consumed by Palestinians.

Consumer prices continued to increase for the **fourth consecutive month** as a result of a rise in the prices of fresh chicken, fresh vegetables, fruit, and fuel during April 2022. **In April 2022, the overall consumer price index (CPI) increased by 1.08 percent compared with March 2022** (1.26 percent in the West Bank, 0.72 percent in Gaza Strip). The Food CPI also increased in April 2022 by 3.03 percent compared with March 2022 (3.62 percent in the West Bank, and 1.88 percent in Gaza Strip).¹

The price increases are mainly driven by the increase in prices of the following commodities: fresh chicken by 10.32 percent, fresh vegetables by 10.16 percent, and fresh fruit by 3.79 percent.

When compared to April 2021, the overall CPI increased by 3.78 percent (3.51 percent n the West Bank, and 4.31 percent in Gaza Strip), and the Food CPI increased significantly by 9.66 percent (9.63 percent in the West Bank, and 10.50 percent in Gaza Strip).

The continuous increase, especially in the food prices, can be attributed to the rise of global prices. The FAO Food Price Index (FFPI) averaged 158.50 points in April 2022, a slight decrease of 0.50 percent from the all-time high

reached in March. The (FFPI) is still 29.8 percent higher than its value in the previous year (April 2021). The drop in the (FFPI) in April was led by a significant decrease in the vegetable oil index (5.7 percent decrease from the record high registered in March) along with a slight decline in the cereal price index. Meanwhile, sugar, meat and dairy price indices increased slightly.

The price of global commodities has been increasing significantly as a result of the impact of the Ukraine crisis; global supply interruptions attributed to China's policy responses to high COVID-19 mortality rates; and the continuous increase in energy prices. Additional increase in the price of wheat flour is expected due to India's recent ban on wheat exports after costs rose and a recordbreaking heatwave damaged local crops.

The crisis in Ukraine, along with the economic sanctions imposed on Russia, has resulted in a global shortage in essential products such as oil, gas, and cereals imported from Ukraine and Russia, disruption of supply chains, and the rise of the food prices. The consequences especially affect import-dependent countries such as Palestine, where the import dependency ratio reached 32 percent.

In Palestine, the impact of the crisis has been noticed in the prices of wheat flour and energy prices. The wheat flour prices increased by 14 percent in the West Bank and 41 percent in the Gaza Strip since the beginning of the Ukraine crisis. Energy prices have also increased by 4-6 percent.

To tackle the increase in prices, the government issued a Value Added Tax (VAT) exemption of 16 percent on all sales of wheat flour wrapped in bags of 25 kg and above for three months (March, April, May); and a VAT exemption of 16 percent for bakeries for three months (March, April, May). The government will likely extend these policies after May. Despite the efforts, the prices continue to increase, and the purchasing power of the most vulnerable individuals is decreasing. This increase in prices will have a major impact on the living standards of vulnerable Palestinian households,

The price of Excellent gasoline 95, one of the most commonly used fuels in Palestine, has increased in April 2022 by 10.76 percent compared to April 2021 and increased by 4.11 percent compared to March. Also, the price of diesel, which is mainly used for heating, increased by 19.91 percent during April compared to the same month in 2021 and increased by 6.02 percent when compared to the previous month.

In April 2022, the average value of **WFP food ration prices** has increased 6 percent since the beginning of the **Ukraine crisis (February 2022)** and has increased by 16 percent compared to April 2021.

According to WFP Palestine's field observation from WFP's beneficiaries (CBT Voucher and In-kind), **38 percent (32 percent in Gaza and 52 percent in West Bank) reported witnessing an increase in prices of most food commodities** such as vegetable oil, pulses, wheat flour, vegetables and fruits, chicken, eggs, rice, powder milk, cold cuts, and sugar.

Also, only 15 percent of those in the West Bank and 47 percent of those in Gaza reported being able to buy the same amount of food as they did during the previous month, relying on paying the cost difference in cash or on credit, or through purchasing the same quantities of the same types of food, but with lower quality at lower prices. The remainder (85 percent in the West bank and 53 percent in Gaza) relied on some coping strategies, such as consuming less quality food or less preferred food, reducing quantities of food consumed, purchasing food on credit, relying on help from friends and relatives, and ceasing consumption of some food items such as fruits, meat, and chicken and instead relying only on basic commodities such as wheat flour, olive oil, and rice.

Additionally, according to WFP Palestine's field observation from WFP's contracted shops, **95 percent of the shops**

reported that the product availability is sufficient to cover the demand. 58 percent of WFP's contracted shops reported that the recent increase in prices will have a negative impact on their sales volume in the coming months.

The graphs on the next page highlight the prices trends, commodities stocks availability, and the implication of the

Situation Monitoring: Implications & Potential impact

Around 1.8 million persons are estimated to be moderately or severely food insecure across **Palestine.** Meanwhile, 31.2 percent of households were categorized as either moderately (13.6 percent) or severely (17.6 percent) food insecure. The status of food security in the Gaza Strip has worsened, with the share of severely food insecure households reaching 40.7 percent. This brings the total share of households experiencing severe or moderate food insecurity in the Gaza Strip up to a staggering 64.4 percent. The unemployment and poverty rate has also worsened in the Gaza strip in 2021, reaching 47 percent and 59 percent respectively. In addition, poor families registered in the National Cash Transfer programme (NCTP) have not received any payments since May 2021 and for seven consecutive months, civil servants have not received their full salary due to the lack of funding and the fiscal challenges that the PA is facing. Moreover, 80 percent of the population in the Gaza Strip depends on humanitarian assistance, with WFP and UNRWA providing food assistance to **around 1.5 million people.** The situation has been further exacerbated by the ongoing crisis in Ukraine with wheat flour prices increasing by 14 percent in West Bank and 41 percent in Gaza Strip. While the stocks reserves remain at their normal level of 2-3 months, this is a growing concern in light of the ongoing global supply chain constraints, recalling that Palestine is an import-dependent country.

The ministerial meeting of the Ad-Hoc Liaison Committee (AHLC) was concluded in Brussels in May chaired by the Minister of Foreign Affairs of Norway and attended by the Palestinian Prime Minister, and the donor community. The participants reaffirm the need to increase the financial support to the PA, and the PA to implement fiscal reforms. The participants also call the PA and the government of Israel to work closely on fiscal files, water, trade, and energy.
