In 2022, the World Bank reclassified Zambia as a low-income country after a decade in the lower middle-income category. The reclassification followed sustained poor economic performance exacerbated by the COVID-19 pandemic. More than half of the country’s 17.8 million people live below the poverty line. The country continues grappling with a high debt burden, posing a significant threat to the government’s efforts to deliver social services, alleviate poverty, and achieve zero hunger.

In the last decade, Zambia has suffered from the impact of climate change, with frequent, prolonged dry spells, extreme high temperatures, and floods that have undermined food security, threatened the livelihoods of many smallholder farming households. Smallholders are the country’s largest population of food producers, responsible for up to 90 percent of the food produced in Zambia.

Under the Zambia Country Strategic Plan (CSP) 2019–2024, WFP provides food assistance to vulnerable and food insecure people, including on-demand logistics support during emergencies. WFP also implements integrated nutrition and smallholder farmer support interventions in food insecure areas, and helps strengthen the capacity of the Government to implement national programmes and systems that contribute to zero hunger and improved nutrition.

WFP has been present in Zambia since 1967, providing food assistance and strengthening the capacity of the Government in addressing people’s food and nutrition needs.

**Operational Updates**

WFP continued to implement an integrated package of interventions in support of vulnerable communities and refugees from the Democratic Republic of the Congo (DRC). In June, WFP assisted 135,391 beneficiaries, including 18,478 refugees and asylum seekers reached through cash and food assistance, 24,367 beneficiaries through nutrition support interventions, and 71,989 smallholder farmers through resilience and recovery interventions. Furthermore, WFP assisted 20,557 people through social protection activities.

**Nutrition promotion:** In support of the national nutrition improvement agenda, WFP continued to work with the Ministry of Health (MoH) and National Food and Nutrition Commission (NFNC) to implement the healthy diets campaign, a nationwide health and nutrition promotion campaign designed to help consumers make better food choices and stimulate demand for nutritious food. During the month, WFP supported MoH and NFNC in orienting 479 MoH health facility staff on the campaign, facilitated through a series of training of trainers in the 16 WFP-supported districts. The trained staff in turn rolled out trainings to 379 community health volunteers (CHVs) (87 percent women) from nine districts (Chibombo, Chisamba, Kaoma, Kapiri, Mongu, Mumbwa, Nyimba and Petauke, Lundazi, Katete, Monze, Mazabuka); the roll out trainings focused on strengthening the CHVs’ capacities to deliver nutrition social and behaviour change communication messages in the communities. Alongside the trainings, WFP distributed nutrition counselling cards and resource manuals to the CHVs to help them effectively promote good nutrition practices.

**Smallholder support:** On 30 June, WFP concluded the implementation of its two-year project in support of vulnerable smallholder farmers impacted by the droughts during the 2018/2019 farming season in Southern and Western provinces. The project, implemented in five districts (Monze, Gwembe, Kalomo, Sioma and Shang’ombo), achieved its targets, reaching nearly 110,000 smallholder farmers through the following: trainings in conservation agriculture and post-harvest management; distribution of nutritious and/or drought tolerant crop varieties and hermetic grain storage technologies; market access support through linkages to established commodity aggregation systems; and access to finance through savings groups established with WFP support. In addition, WFP reached over 43,000 school children

Strategic Result 01: Everyone has access to food

Strategic Outcome 01: Crisis-affected people, including refugees can meet their basic food and nutrition needs all year.

Focus Area: Crisis response

Activities:
- Unconditional cash-based and food transfers.
- Supplementary feeding for targeted refugees.

Strategic Result 02: No one suffers from malnutrition

Strategic Outcome 02: Vulnerable people in Zambia have improved nutrition status in line with national targets by 2024.

Focus Area: Root causes

Activities:
- Provide technical support to government institutions and the private sector for the reduction of malnutrition and the scale up of high-impact nutrition interventions.

Strategic Result 03: Smallholders have improved food security and nutrition through improved productivity and incomes

Strategic Outcome 03: Smallholder farmers in Zambia, especially women, have increased access to markets, enhanced resilience to climate shocks and diversified livelihoods by 2030.

Focus Area: Resilience Building

Activities:
- Promote climate-smart agriculture, crop diversification through access to finance, climate services, post-harvest management support and access to markets for smallholder farmers.

Strategic Result 04: Food systems are sustainable

Strategic Outcome 04: Government institutions in Zambia have more efficient, effective and shock-responsive social protection systems that contribute to the achievement of SDG2.

Focus area: Root causes

Activities:
- Provide technical expertise and other services for strengthening the systems and capacities of government institutions and other partners in implementing and disaster social protection programmes and early warning preparedness and response activities.
- Provide technical support to the Government in strengthening systems and capacities of the structure for the HGSM programme.

Strategic Result 05: Developing countries have strengthened capacity to implement the SDGs

Strategic Outcome 05: Provide on-demand service provision to the Government, private sector, development partners and United Nations agencies

Focus area: Crisis response

Activities:
- Provision of logistics and technical advisory support

Monitoring

WFP conducted an outcome monitoring exercise to assess the food security of the refugees at the WFP-supported Mantapala Refugee Settlement in Nchelenge District. The exercise is the first conducted since WFP introduced ration cuts in April 2022, triggered by funding gaps, and will focus on the impact of the ration cuts on the beneficiaries' food and nutrition security. In addition, WFP commenced preparations for the close-out evaluation of drought early recovery and smallholder and nutrition support interventions following their successful implementation across 17 districts in Central, Eastern, Southern and Western provinces.

Before the closeout, WFP facilitated an oversight field visit to all the project districts, involving government officials (from ministries of Education and Agriculture at national and provincial levels) and cooperating partners. The teams appreciated the benefits of the interventions on the targeted communities. After the field visits, the participating teams convened in Livingstone for the project closeout meeting, which aimed to document and reflect on project achievements, challenges, lessons learnt and recommendations for future programming. As part of the sustainability mechanism, participating line ministries committed to anchor the project activities within existing government activities to leverage the project investments and build on the achievements.

Social protection: To improve accountability in the management of the Home-Grown School Meals (HGSM) Programme, WFP facilitated a refresher training for 316 district and school level focal persons from 14 districts where the Ministry of Education deployed the Food Tracking System (FTS). The trainings strengthened the reporting capacities of the staff, enabling the schools to timely submit distribution reports to the ministry. So far deployed in 144 schools in 14 districts, the FTS is a web-based system developed for the ministry to track the movement of commodities from procurement to consumption, ensuring improved commodity accountability in the HGSM programme.

As part of continued efforts in diversifying school meals and improving school children’s knowledge on the importance of healthy diets, WFP finalised installing the planned 71 hydroponics gardens in 70 schools across 16 districts. Moreover, WFP trained 48 government staff from the ministries of Education, Agriculture and Community Development and Social Services in the target districts on the management of the hydroponics units. The trainings, which targeted head teachers, school health and nutrition coordinators, school children and community members, also focused on the development of sustainability plans. Since 2019, WFP has been supporting the Ministry of Agriculture in setting up hydroponics in schools to enhance nutrition education and promote vegetable production for diversified school meals.
