## WFP EVALUATION

# SUMMARY OF EVIDENCE

## Social Protection

### CONTEXT

Social protection addresses vulnerability, poverty and inequality by aiming to redistribute resources, and providing support to help individuals or households to manage the risks they face, on the journey towards Zero Hunger. While each country defines social protection differently, typically social protection programmes include school feeding, nutrition intervention, food for work/assets, cash and/or in-kind transfers, some contributory and some not, and some labour market schemes.

WFP's engagement in social protection is underpinned by the three concerns of needs, risks and inequalities. It focuses on populations who are food insecure or malnourished, or who are vulnerable to becoming so, and recognises governments as the key architects and delivery mechanisms in social protection systems.

WFP aims to help populations increase their access to national social protection systems to:

- meet food security, nutrition and associated essential needs; and
- better manage the risks and shocks they face.

In 2022, WFP's support for national social protection systems and programmes reached 88 countries globally.

### 4 LESSONS

1

**Partnership challenges.** Remaining challenges in WFP's partnerships for social protection span the range from defining and communicating WFP's role in social protection to national partners to seeking out, and formulating, strategically focused partnerships to engage in social protection at the systemic rather than project level. Key is clearer analysis of partnership needs, required scope and the most appropriate form of partnership given respective comparative advantages.

2

**Scope to link analysis with programmatic design and implementation.** Despite its comparative advantages in analytical work, piloting and modelling, and technical innovation, there is still space for WFP to join these capacities up with foundational areas of programme delivery, such as targeting, and to formulate and articulate a clear strategic approach to these intersections.

3

**Adopting a nexus lens has supported both beneficiary and community resilience, and contributions to peace.** However, there is still scope to improve both strategically and operationally, for example through a more developed and medium-term approach to capacity strengthening for social protection, including analysis of capacity gaps.

4

**Testing assumptions.** The WFP Social Protection Strategy contains valid and relevant assumptions, which evaluation evidence has frequently found untested. Subsequently, this undermines social protection design and implementation. In particular, a realistic assessment of Government engagement/commitment/capacity for handover ex-ante, and any associated capacity strengthening requirements, is fundamental.

# 3 KEY FINDINGS

Evaluations offer **considerable evidence of positive social protection results** generated by WFP, at short-term, medium term and long-term level. However, since current corporate performance indicators focus on individual food security and nutrition gains, rather than on systems-strengthening, **many of WFP's systems-strengthening gains in the area of social protection are not currently being fully incentivised or captured.**

## Contextual features do not define the nature of WFP's social protection programming - but adaptive elements have included:

- building emergency responses on existing national social protection programmes in emergencies;
- supporting governments in fine-tuning existing social protection programmes in more development-focused environments; and
- expanding urban social protection programming.

## WFP social protection programming delivered results at four levels:

- *In the short term*, strengthening social protection system architectures and supporting national programmes to help people to meet their essential needs and/or manage risks; generating evidence and/or supporting co-ordination between national actors on social protection.
- *In the medium term*, improving the quality and coverage of national social protection service provision by improving needs identification systems; enhancing targeting mechanisms; expanding coverage; and/or helping provide more adequate benefits to *recipients*.
- *In the longer term*, where most results are reported, helping people achieve greater economic and physical access to adequate food and goods and relevant services – for example, by applying school feeding and/or food for assets and resilience programmes as social protection *mechanisms*.
- *Additionally*, WFP's social protection work contributed to supporting local economies, improving social cohesion, building *peace* and enhancing agricultural production through a range of interventions including insurance schemes; financial inclusion programming; engagement with local authorities on social protection; and supporting agricultural diversification.

Evaluations identify three main **comparative advantages and five strengths of WFP** in supporting social protection:

### Comparative advantages

-  Analytical capability and use of evidence capacity
-  Food security and nutrition experience/expertise
-  Ability to engage across the triple nexus

### Strengths

-  Applying specialist technical expertise and experience
-  Enhancing the capacities of local partners
-  Using South-South linkages
-  Using partnerships as a springboard for wider engagement in social protection
-  Piloting/modelling

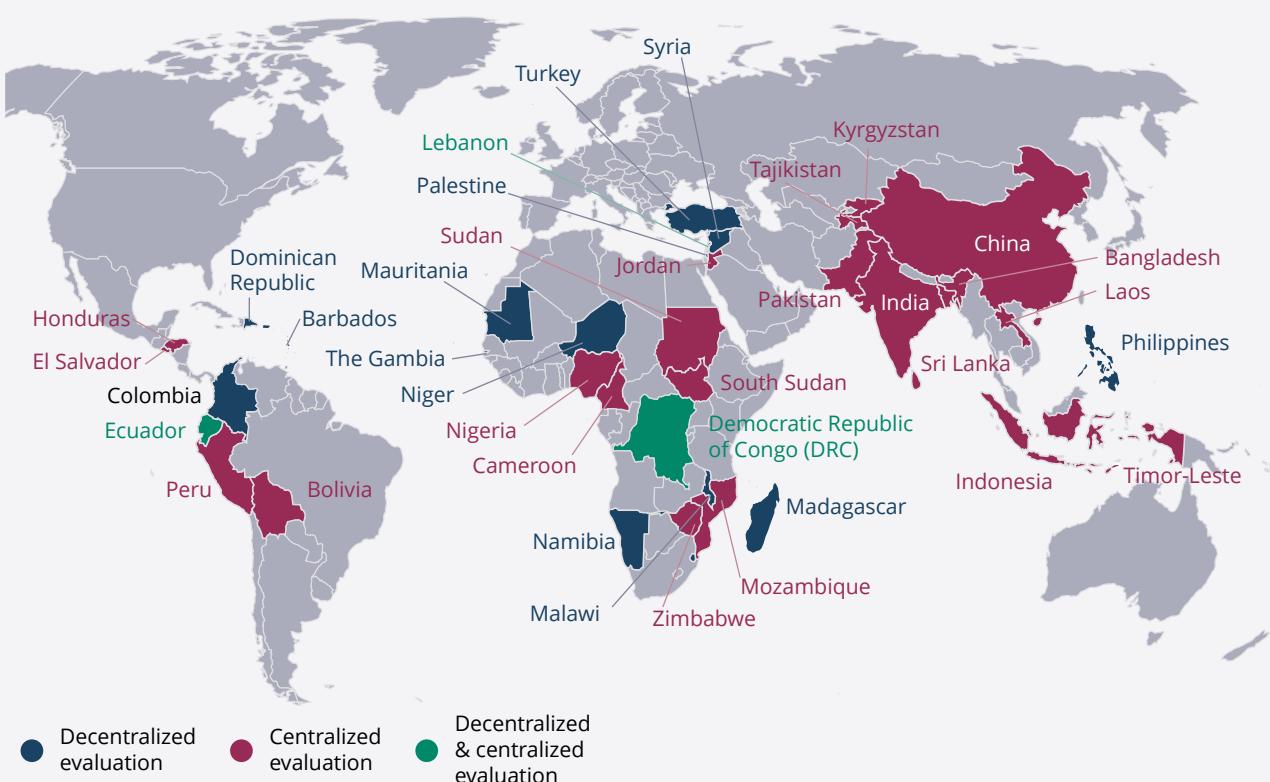

## BREADTH OF EVIDENCE

This summary of evaluation evidence brings together findings from 44 evaluations commissioned by WFP, covering the period 2018-2023. It offers lessons on WFP's social protection programming to inform ongoing and future planning.

The summary has global coverage, covering WFP social protection interventions in 37 different countries. Of the 44 evaluations, 13 were decentralized evaluations of activities; the remainder included 26 Country Strategic Plan evaluations, two policy and three strategic evaluations. All were rated 'satisfactory' or above by WFP's external Post-hoc Quality Assessment (PHQA).

This summary applied the approach and methods set out in WFP's technical note on summaries of evaluation evidence, namely:

- A universe of 44 WFP independent evaluations was collected, which all included information on social protection.
- Evidence was systematically extracted from the evaluations using an analytical framework reflecting key areas of interest identified at framing stage.
- Evidence was analysed and clustered around analytical themes, with key patterns and findings identified.
- The resulting report was drafted and commented upon by stakeholders, being finalised in July 2023.

*The designations employed and the presentation of material in the map does not imply the expression of any opinion whatsoever of WFP concerning the legal or constitutional status of any country, territory or sea area, or concerning the delimitation of frontiers.*
