

Crisis response revision of the Sudan country strategic plan (2019–2024) and corresponding budget increase

	Current	Change	Revised
Duration	January 2019– December 2024	14-month extension	January 2019– February 2026
Beneficiaries	15 631 027	12 051 294	27 682 321
<i>(USD)</i>			
Total cost	4 175 615 081	1 782 058 682	5 957 673 763
Transfer	3 384 762 393	1 543 553 028	4 928 315 421
Implementation	394 639 237	88 637 454	483 276 691
Adjusted direct support costs	170 486 384	41 181 815	211 668 199
Subtotal	3 949 888 015	1 673 372 296	5 623 260 311
Indirect support costs (6.5 percent)	225 727 066	108 686 385	334 413 452

Gender and age marker code: 3

* <http://gender.manuals.wfp.org/en/gender-toolkit/gender-in-programming/gender-and-age-marker/>.

Rationale

1. This revision extends the Sudan country strategic plan from 31 December 2024 to 28 February 2026 to align with a two-month grace period with the United Nations Development Assistance Framework (UNDAF) which has been extended by one year (until 31 December 2025). The extension is being effected due to the current context preventing the development of a new cooperation framework. The revision reflects WFP's key operational adjustments to strengthen the scale of assistance, choice of modalities, supply chain, and access approaches to meet the escalating food and nutrition insecurity following the conflict that erupted in April 2023.
2. The Sudan is facing a complex humanitarian crisis more than 18 months into the conflict, with more than 25 million people (over half the country's population) facing acute food insecurity (Integrated Food Security Phase Classification (IPC) phase 3 or above), including 755,000 people in IPC phase 5.¹ In July 2024, the IPC Famine Review Committee confirmed that IPC phase 5 (famine) is ongoing in Zamzam Camp, North Darfur, with similar conditions likely present in nearby internally displaced person (IDP) sites in El Fasher. This marks the third time a famine determination has been made this century. In addition, other 13 areas in Sudan, primarily in Darfur, Kordofan, Khartoum, and Gezira are at risk of famine².

¹ Integrated Food Security Phase Classification. 2024. *Sudan: Acute Food Insecurity Snapshot: April 2024–February 2025*.

² *Ibid.*

3. The conflict has destroyed critical services and infrastructure, including the health and education sectors. An estimated 4.7 million children under 5 years of age and pregnant and breastfeeding women and girls are suffering from acute malnutrition.³ The complex combination of active conflict, access challenges, macroeconomic instability, and large-scale displacement has led to one of the largest hunger crises globally. As of September 2024, the Sudan hosts 10.8 million IDPs, of which 8 million people have fled their homes since the beginning of the armed conflict, making the Sudan the largest internal displacement crisis worldwide.⁴
4. Sudan's gross domestic product is estimated to have contracted to 12 percent in 2023, with a further 18 percent decline forecasted for 2024 according to the World Bank. This is attributed to inflation (137 percent during the first quarter of 2024 according to the Central Bank of Sudan), currency depreciation (devalued by over 300 percent from July 2023 to July 2024), and low levels of foreign currency reserves compounded by a decline in national cereal production, with 2023–2024 production 46 percent lower than the previous year according to the crop and food supply assessment mission conducted by the Food and Agriculture Organization of the United Nations.⁵
5. In 2024, as of September, despite the pervasive nature of access constraints, WFP has reached over 5.3 million people across 17 states with a combination of in-kind and cash-based transfers (CBTs), nutritional support, school feeding, and resilience-building support. Collectively, humanitarian partners have reached more than 8 million people of the 14.7 million people targeted for assistance with some form of humanitarian aid between January and July 2024, but major challenges remain.

Changes

Strategic orientation

6. No change in strategic orientation.

Country strategic plan outcomes

7. The total number of people in need of urgent food assistance and nutrition support across the Sudan is approximately 25 million people (IPC phase 3+). WFP will give the highest priority to the most vulnerable populations. Across all activities, WFP is targeting approximately 12 million people, with various forms of assistance. Out of these, 8.5 million people most severely affected will be assisted through large-scale general food assistance. WFP will also continue to address the underlying nutrition, food system, and food availability challenges in the Sudan through home-grown school meals, and support to smallholder farmers and other actors in the agricultural value chain.

Country strategic plan outcome 1

8. The budget revision will significantly bolster the scale and reach of the emergency operation. Concerning scale, to meet the historic food insecurity, WFP is substantially increasing the provision of life-saving general food assistance to reach almost 8.5 million of the most acutely food-insecure people. This entails increasing the planned number of beneficiaries both for in-kind assistance (by 6.4 million people) and CBTs (by 2.1 million people).

⁴ International Organization for Migration. 2024. *Displacement Tracking Matrix: Sudan Mobility Update (7)*.

⁵ Food and Agriculture Organization of the United Nations. 2024. *Special Report: 2023 FAO Crop and Food Supply Assessment Mission (CFSAM) to the Republic of the Sudan*.

9. WFP is also increasing rations for the most acutely food-insecure populations and introducing new prioritization criteria to ensure that available resources reach those who need them most with adequate nutrition. Ration size will increase from 70 percent to 100 percent for targeted populations in famine, risk of famine, and other IPC phase 4 locations that host IPC phase 5 populations.
10. Moreover, WFP is introducing a host of new cash approaches (including cash for the prevention of acute malnutrition) and implementation arrangements under activity 3. These new implementation arrangements for cash (including community kitchens and business-to-business models) seek to ensure responses are tailored to local contexts, which often have vastly different circumstances of access, connectivity, and availability of financial service providers. Due to recurrent exposure to natural shocks, WFP will also implement climate-risk financing-related activities.

Country strategic plan outcome 2

11. WFP is introducing CBTs for the prevention of acute malnutrition under activity 4.
12. WFP will expand its home-grown school feeding approach in the Northern State and other stable areas to strengthen linkages with smallholder farmers as a continuum platform for enhancing community resilience, in response to authorities' requests.

Country strategic plan outcome 3

13. WFP will support smallholder farmers, agribusiness and agricultural service providers in the agricultural value chain to improve their post-harvest management practices and access to markets. WFP will leverage partnerships with the private sector actors to support smallholder farmers' access to extension services and post-harvest loss management services.

Country strategic plan outcome 4

14. There are no changes envisaged for activities under this CSP outcome during the extension period. However, budget-related costs will be adjusted for the extension period.

Country strategic plan outcome 5

15. No changes are envisaged for activity 12 during the extension period.

Targeting approach and beneficiary analysis

16. With the determination of famine/risk of famine populations in the Sudan, WFP has re-prioritized general food assistance to identify and target the most acutely food-insecure people through the introduction of a three-tiered approach. Priority 1 are populations in famine and risk of famine areas as well as registered refugees countrywide. Priority 2 are the remaining IPC phase 5 populations as well as IPC phase 4 populations in areas hosting IPC phase 5 populations. Finally, priority 3 includes IPC phase 4 populations in IPC phase 4 localities as well as IPC phase 4 IDPs in IPC phase 3 localities (those hosted in collective settlements with limited recourse to food or livelihood opportunities). Recognizing that the IPC phase 3 population may slide into further food insecurity amid a worsening situation, WFP will strive to assist them through emergency safety net initiatives,⁶ should additional resources become available.

⁶ A new project that is being developed with the World Bank targeting IPC phase 3 locations whose objective is to prevent further deterioration of food security.

17. Nutrition support will be provided all year round with geographic targeting and prioritization coordinated through the nutrition cluster to ensure the continuum of care and complementarity with other nutrition stakeholders in addition to WFP internal programmatic convergence. The prioritization for nutrition is based on the prevalence of wasting, food insecurity level using IPC phases, with areas above 15 percent prevalence of wasting in children 6–59 months prioritized, with first priority given to localities where there is very high wasting prevalence and high food insecurity. For the food assistance for assets and smallholder agricultural market support programmes, WFP will continue to support existing beneficiaries in relatively stable areas where they have not relocated, ensuring multi-year assistance. In newly identified food-insecure locations, informed by recent IPC findings and community needs assessments, new beneficiaries are being considered within these target communities.
18. *Rations:* In 2024, considering all adverse factors and challenges, priority 1 populations were targeted with 70 percent rations, while the plan considered 50 percent rations for all other targeted populations. Moving into 2025, the plan considers a full ration (100 percent) for 12 months for populations in famine conditions, at risk of famine and IPC phase 4 locations hosting IPC phase 5 population. Refugees under priority 1 will continue to be targeted with 70 percent rations for the same duration (refugees in famine or risk of famine areas will receive 100 percent rations). Under priority 2, populations in areas hosting IPC phase 5 populations will also be targeted to receive 100 percent rations for 12 months. Meanwhile, plans for priority 3 populations in IPC phase 4 and IPC phase 3 areas consider 50 percent rations for 8 to 12 months, depending on the severity of food insecurity.
19. WFP will seek to ensure greater convergence between general food assistance and nutrition programming, ensuring in-kind food transfers meet minimum nutritional adequacy standards by the end of 2025. Twenty percent of general food assistance beneficiaries (accounting for those households with pregnant and breastfeeding women and girls and children under 5 years) will receive blanket supplementary feeding for the prevention of acute malnutrition, where resources and conditions allow. Moreover, treatment of acute malnutrition will be linked wherever feasible to both general food assistance and blanket supplementary feeding to reduce the vulnerability of these households, reduce malnourished children’s mortality, and improve the effectiveness of nutrition treatment. For the ongoing identification of needs and prioritization, food security and nutrition assessments will be undertaken.

Transfer modalities

20. Provision of in-kind assistance is anticipated to remain the predominant modality, targeting 6.4 million beneficiaries. Nevertheless, recognizing the increasing feasibility of cash assistance and the multi-faceted advantages of cash support to local economies, WFP is significantly scaling up its plan for the provision of CBTs to 2.1 million beneficiaries through diverse transfer mechanisms.⁷
21. *Additional financial service providers:* WFP is onboarding additional financial service providers as well as retailers to expand both cash-in-hand and e-vouchers. WFP has also piloted digital bank transfers to beneficiaries and will scale this approach in 2025. WFP is also piloting the use of the business-to-business model, partnering with upstream suppliers such as importers, wholesalers, and distributors who will manage distributions through retail outlets in WFP’s operational areas, especially those with compromised access.

⁷ WFP has conducted a number of cash feasibility assessments, and more are planned wherever possible.

22. *Introduction of hot meals:* WFP is rolling out community kitchens via emergency response rooms and other national partners to concurrently support food security in access-constrained areas, and bolster community-based institutions in the Sudan. In addition to new general food assistance approaches, WFP is also introducing cash or voucher assistance for the prevention of acute malnutrition in lieu of the blanket supplementary feeding (BSF) ration for households receiving CBT under the general food assistance. This approach will target children under five years of age and pregnant and breastfeeding women to prevent acute malnutrition. By linking cash top-ups specifically designed for the prevention of acute malnutrition to existing general food assistance programmes, WFP aims to expand the reach of malnutrition prevention efforts, increase cost efficiency, and provide greater flexibility to meet localized needs. WFP expects to initiate this modality in January 2025.
23. *Modality for asset creation:* Under activity 6, the focus continues to be on asset creation and technical assistance through safety nets, with the primary modality being CBTs. However, in areas where markets are not functional or financial services are unavailable, alternative modalities will be employed such as in-kind food assistance.

Partnerships

24. WFP will continue engaging federal, state, and local authorities and working with other local actors to ease the delivery of assistance to those most in need. WFP will further strengthen an extensive network of cooperating partners built in 2024, across national non-governmental organizations, international non-governmental organizations, the Sudanese Red Crescent Society as well as local and community-based organizations, to deliver assistance, both cross-border and crossline. In collaboration with the Office of the United Nations High Commissioner for Refugees, WFP will target registered refugees countrywide classified under priority 1 for food assistance.
25. Simultaneously, WFP will reinforce partnerships with United Nations agencies through joint programming and particular focus will be paid to strengthening the core sectors WFP leads and supports, including the food security cluster, nutrition sector, cash working group, logistics cluster, and emergency telecommunications cluster. These will be used to collaboratively identify priorities and gaps in the respective sectors.
26. WFP is increasing partnerships with a broader base of partners to ensure an end-to-end value chain approach to support agricultural productivity and strengthen food systems and long-term resilience in areas without active conflict and relative stability, predominately in eastern Sudan. WFP will empower private sector partners, consumer cooperatives and farmers' organizations.
27. *Resource mobilization:* To increase fundraising efforts to meet escalating humanitarian needs, WFP is intensifying its engagement with existing humanitarian funding partners, while also engaging new partners, including the private sector, to bridge the gap between the projected income and the proposed budget. A larger mobilization effort is underway with promising projections including a consistent and tailored approach with newer donors such as those in the Gulf Cooperation Council, as well as development and international financial institutions. These and other efforts are captured in the forthcoming resource mobilization strategy.
28. WFP will continue to conduct periodic reviews of its resource mobilization plans to assess needs against actual funding levels. The elevated needs on the ground necessitate maintaining a robust budget and sufficient resources to avoid compromising life-saving operations. The 2025 budget reflects the unprecedented humanitarian situation, and scaling back would limit WFP's ability to respond effectively to the growing crisis.

Country office capacity

29. An access/humanitarian-military interaction function has been established to reinforce WFP's ability to negotiate safe and secure passage of assistance. As part of the inter-agency hubs and spokes model, WFP is leading the geographic expansion into Zalingei in Central Darfur, Karrari in Khartoum and other forthcoming locations via the establishment and maintenance of new premises. Re-establishing physical presence is critical to engage local actors and to create anchor points for the scale-up of assistance. This includes bolstering staffing capacity, for example for CBT scale-up, among others.

Supply chain

30. Persistent and volatile insecurity, notably in the Darfurs and Kordofans, has been compounded by bureaucratic access impediments, including inconsistent impositions on movement, recurrent requests for information, time-bound authorizations, and limitations in volume of movement. These also extend to delays in customs and security clearances, reluctance among transporters to move humanitarian cargo and increasing transport costs. Mitigation measures have been established on continued principled engagement with all actors in the conflict on access and deconfliction. To maximize possibilities of movement to different locations in-country, WFP and the larger humanitarian community are engaged with authorities for opening alternate corridors (both cross-border and crossline).
31. WFP is also augmenting fleet capacities, exploring cross-border deliveries, and considering selective local procurement options with transporters, authorities on ground and partners, ensuring food safety and quality compliance during the whole food supply chain to preserve quality and safety, meeting local food regulatory requirements of food commodities intended for distribution to beneficiaries.

Service provision

32. Plans remain in place to scale up the provision of on-demand services via the logistics cluster, the United Nations Humanitarian Air Service and the emergency telecommunications cluster. The United Nations Humanitarian Air Service looks to avail direct flights between Port Sudan and Dongola (Northern State), as well as Damazine (Blue Nile), Kadugli (South Kordofan), Kosti (White Nile), El Obeid (North Kordofan), and the Darfurs, circumstances permitting. In addition, to boost communication, data exchange, and internet access to better reach affected people, an undersea cable initiative is being developed to provide partners with reliable, dedicated, and high-speed internet access and telecommunications services. In regions where fibre optic cables are unavailable, alternate last-mile connectivity options such as virtual satellite and wireless connectivity will be implemented.

Monitoring and evaluation

33. In line with minimum monitoring requirements, WFP is enhancing its process and outcome monitoring arrangements. In doing so, WFP has deployed third-party monitoring (TPM) firms in hard-to-reach areas to augment its monitoring capacity. These firms assess WFP's onsite distribution activities and conduct post-distribution monitoring that confirms receipt and utilization of assistance by beneficiaries. Following a recent assessment and ongoing scale-up efforts, WFP is in the process of recruiting an additional TPM firm to further increase monitoring capacity and coverage. While face-to-face surveys are being prioritized where viable, remote data collection tools will be deployed in more access-constrained areas to gather data from beneficiaries, ensuring enhanced and consistent oversight. The monitoring escalation system is being strengthened to capture, escalate, and track the resolution of issues through cross-functional coordination. Additionally, thematic reviews will be

conducted, as feasible, to generate evidence for learning, adaptive programming and accountability to beneficiaries.

Accountability to affected people, protection and conflict sensitivity risks, restrictions related to gender and disabilities

34. WFP regularly assesses protection and conflict risks associated with conflict sensitivity through direct observations, review of secondary data, community consultations, and consultations with key stakeholders. Identified risks are used to inform programmatic decisions, including modalities, and design mitigation measures. Conflict sensitivity is embedded throughout the programme cycle. Multiple channels are in place to engage with, and receive feedback from, affected people. A gender strategy is currently being drafted and will be complemented with a detailed action plan to guide operations. WFP will strengthen the capacity building of WFP staff and partners to integrate people-centred approaches.
35. WFP will continue to take proactive steps to enhance accountability to affected people initiatives amid the current crisis through a consultative and participatory process and community feedback mechanisms to support programme planning, implementation and review. To effectively operationalize accountability to affected people, WFP employs tailored context or state-specific approaches, recognizing the diversity of needs across different regions. Multiple diversified channels will be employed to engage beneficiaries and stakeholders using existing community structures, community outreach volunteers and internet-based channels to reach broader audiences and ensure inclusivity. Community feedback mechanisms will use multiple communication channels including both toll-free and additional phone lines, email, Chatbot, click-to-call, self-reporting link and digital helpdesks integrated into a centralized case management system. Accountability to affected people services will be expanded to cover all programme areas and hard-to-reach locations by using cooperating partners, third-party monitors and WFP field staff.
36. *Identity management:* WFP will continue deploying WFP's digital beneficiary information and transfer management platform (SCOPE). Various options, including self-registration tools, and paper-based system will also be used and integrated into SCOPE, paving the way for additional controls when in-kind food and CBT transfers are provided. Financial resources are incorporated in this revision to deliver on this pillar of assurance.

Transition/handover strategy

37. Given the current conflict context, WFP integrates elements of sustainability at a granular and more localized level. This includes equipping communities to design and maintain their own interventions and developing social protection delivery systems to strengthen the capacities of various stakeholders in the wheat-producing and other sectors, and continue making enhancements to the existing humanitarian delivery systems to lay the foundation for longer-term safety net programming, including through a government-led social protection system.

Risk management

38. WFP acknowledges a higher degree of risk for the majority of priority areas. Risks stem from constrained access, lawlessness and the possibility of looting and diversions within conflict zones, as well as limitations on monitoring and reporting. The risks to the safety and security of humanitarian workers, given the intensity and unpredictability of the conflict, are also significant. An inter-agency access strategy defines redlines and broader rules of engagement with parties to the conflict in both crossline and cross-border activities. WFP's operational plans are regularly adjusted, as the balance of risks shifts in line with the conflict and prevailing access conditions.

39. Achievement of scale-up plans, including sustaining full ration sizes, is contingent upon securing adequate funding levels. Funding shortfalls may limit the operation's ability to achieve its targets. The country office is strategizing to diversify funding sources and optimize existing resources where feasible. The programme team will continue to assess funding streams, prioritizing target famine locations to save lives with regular review and adjustment of ration sizes as appropriate.
40. Escalation protocols and spot checks have been developed in line with the Global Assurance Project given the volatility of the context. In all risk areas, WFP has activated mitigation measures and safeguards that are continuously reviewed and updated against the evolving dynamics. However, WFP and its funding partners recognize that there is a degree of residual risk which cannot be fully controlled in this volatile context. WFP is considering adopting different CBT modalities rather than direct cash distribution of the Sudanese pound to mitigate the liquidity crisis and also pay most of the major suppliers in USD when necessary. The operations management team under the United Nations country team has agreed with the United Nations headquarters treasury to implement the delivery mechanism that the United Nations headquarters has for Sudan across all the United Nations agencies to ensure there is enough USD liquidity for United Nations agencies to implement the operations in Sudan.

Social and environmental safeguards

41. WFP has augmented its capacity to embed environmental and social safeguards in its programming, notably with various development and international financial institutions. Risks are identified through desk and field-based assessments, feeding into detailed mitigation and corrective measures. Capacity building continues to be rolled out for field-based staff as well as for partners.
